

First 5G-Powered Remote Brain Surgery

A surgeon in China performed the world's first remote brain surgery using 5G technology while the patient was more than 1,800 miles away. <https://digit.in/apr19-79>

Robots to park your car

At France's Lyon Airport, startup Stanley Robotics has unveiled its new automated robotic valet system. <https://digit.in/apr19-80>

Samsung Galaxy S10 Plus

Brilliant in so many ways, lacking in some

The new Samsung Galaxy S10 Plus comes with several new features and numerous improvements over its predecessor.

Build and Design

While the power button is placed way too high on the left, it is something one can get used to. The phone, being made of Gorilla Glass 6 on the front and Gorilla Glass 5 on the back is extremely slippery and required to be placed in its case for safety. The S10 Plus's curvature resembles that of the Note 9. The phone is 14 grams lighter than its predecessor, despite a denser battery and a bigger form-factor.

Display

The most notable feature about the Samsung Galaxy S10 Plus's display is that it supports HDR10+. Also, if you're a content creator, the Natural setting is the right choice for you and otherwise the Vivid setting is better. Thanks to a high level of brightness, the Samsung Galaxy S10 absolutely dominates the bright outdoors. The display itself is undisputedly class-leading and for the first time, Samsung is shipping with a screen protector pre-applied.

Ultrasonic Fingerprint Sensor

Overall, we are very happy with the effectiveness of the in-display fingerprint sensor on the Samsung Galaxy S10 Plus. Sure it's not the fastest out there, but it is still fast enough to not come across as slow. Additionally, the speed of the sensor is something that Samsung can improve over time with software updates like they already have done pre-launch. If you do end up buying the phone, we recommend running the update before getting involved with the fingerprint sensor.

Performance

We were left very impressed by the new SoC and associated components, which allows the Samsung Galaxy S10 Plus to score highly on our performance benchmarks. In our testing, we found no reason to be left unhappy with the S10 Plus's performance, which is rather rare for us, especially this early in the year.

Primary Camera

The Samsung Galaxy S10 Plus has a camera that manages to work as well as its flagships from last year, but the new features introduced (which are many) need serious improvements. Thankfully, most of this can be done through software updates, so hopefully, things will get better.

Selfie Camera

In terms of the image quality, the S10 Plus produces some of the best selfies

out there, with adequate sharpness and enough detail retention. Day time shots regardless of whether they're taken in the shade or against the sun did come out very impressive and we're pretty happy with the output. Low light photos, require flash to be any good at all.

OneUI

The operating system is elegant, clean and easy to navigate. It does offer enough customization options for both the look and feel and the performance aspects of your device. OneUI offers the traditional on-screen navigation buttons, but also offers a gesture-based system which is pretty unique.

Battery Life and Charging

On the Geekbench battery life test, the phone lasted about 6 hours and 20 minutes. In day to day usage, the phone lasted a day and a half, being pulled off the charger at 8 am and being needed to be charged back up around noon the next day. Reverse charging also works as advertised, but is slow if you're trying to charge another smartphone.

Bottomline

The Samsung Galaxy S10 Plus is quite a banger of a phone and a great sign of things to come, from Samsung and hopefully other manufacturers in the coming months. The phone packs enough power under the hood to be able to handle anything you throw at it. As an imaging device, the phone continues to be as impressive as last year's offerings, but some of the new features introduced this year need to be improved, especially the Super Night shot feature, which needs to be its own mode and not a scene optimizer setting.
