

One-Punch Man' 2 Trailer Released

After years away, One-Punch Man series will return this spring, and its first full trailer has gone live. <https://dgit.in/apr19-57>

Quest for the Thrones Begins

HBO has scattered six Iron Thrones around the world ahead of 'Game of Thrones' season 8. <https://dgit.in/apr19-58>

3. **DirectX:** Everyone who has used a Windows system in their life must be familiar with the term DirectX. Microsoft's DirectX is a powerful tool that provides APIs that you can use to create games and other high performance multimedia applications. DirectX supports both 2D and 3D graphics rendering, along with latest APIs from NVIDIA and AMD's Radeon.
4. **DirectML:** Machine Learning is the new trend in software development. Everyone is trying to jump onto the bandwagon and why not? DirectML enables the power of using trained machine learning models in your application. This also supports hardware acceleration that enables high performance for quick evaluation of results.
5. **Havok:** Havok is a modular suite of software development kits for game engines that puts the power into the hands of creators, enabling state-of-the-art believability and interactivity through advanced physics simulation and pathfinding, while mitigating the overall cost and risks associated with creating today's leading video games.

Test

Now after building an app, you need to test it to check if it does what it is

meant to do. Even for the testing side, Game Stack has many applications to play around with.

1. **Partner Center:** Microsoft Partner Center provides you the ability to properly execute your game updates and fixes so that you can provide a smooth experience to your users. It also provides you the way to deploy 5x5 codes and manage beta access for specific people so that you can be sure that the game is ready to go.
2. **PlayFab Content:** In PlayFab content you can make the most of your soft launch window by leveraging PlayFab to run experiments, monitor performance, and tune configuration to boost key stats like retention and monetization.
3. **Visual Studio:** As a great IDE Visual Studio provides you the ability to test or debug your code pretty easily. You can harness the power of the comprehensive testing tools that are available within the IDE and diagnose with ease, test often and release with confidence.
4. **Visual Studio App Center:** Visual Studio app center provides you a platform agnostic overview of the deployment system. Whether you make your game in Unity, MonoGame or in Native Java or Swift, you can run tests on real Android

or iOS devices and release with absolute confidence.

Publish

Now after designing the game, building it and testing it thoroughly the next step that you want to achieve is to publish your game on various platforms. Now for that, Game-Stack has quite a lot of tools to do the same.

1. **Azure Special Anchor:** If your game is based on some AR requirement then you can easily use this tool to publish on multiple platforms. This platform is designed to deploy AR and location based games that are slowly capturing the market. Microsoft's recent HoloLens is also supported.
2. **Creators Program:** Creators program is there to help to deploy your code for Xbox and Windows. In creators program you don't need any concept approval and the certification process is easy and fast. This allows you to quickly publish your game across the Microsoft ecosystem.
3. **ID@Xbox:** This program enables the power to qualified game developers to unleash their creativity by self-publishing digital games on Xbox One and Windows 10 with Xbox Live support.
4. **Partner Center:** Whether you're an

*CODING MATTERS

*Homepage for JavaScript Standards

Ecma TC39, the JavaScript Standards Committee, has launched a website to make it easier to follow updates to the JavaScript specification <https://dgit.in/javaHome>

*Red Team Project launched

The Linux Foundation has launched a new project aimed at incubating open source cybersecurity tools to make open source software safer to use. <https://dgit.in/RedTeamProject>

*Go Developer Network launched

A network for Go devs has been launched by a combination of the Go community leaders at GoBridge and Google for a single place for information on Go. <https://dgit.in/GoDevNet>
