

Whatsapp testing reverse image search

According to a report, a beta version of WhatsApp's Android app has a new feature to search an image directly from the chat. <https://digit.in/apr19-67>

Facebook's massive outage

Facebook, Instagram and WhatsApp faced a 14 hour outage as a result of a server configuration change. <https://digit.in/apr19-68>

Unfriendly batteries

Samsung doesn't want anyone messing with the batteries considering that they are strongly glued down to the body. However, if you're planning to use the device longer than the time the next flagship comes out, you might require a battery replacement to breathe new life into it.

Samsung Galaxy S10

Capacitive touch to the rescue

The ultrasonic fingerprint sensor is only available on the S10 and S10+. However, the S10e uses a capacitive fingerprint sensor placed on the power button. Although more reliable, accessing it requires the removal of the screen, causing unnecessary complications in the repair process.

Non-modular fingerprint-sensor

Although the idea of having an ultrasonic fingerprint sensor sounds great, the implementation on the S10 could have been better. The sensor seems to be stuck tightly on the screen. If the sensor stops working, the only solution seems like replacing the screen altogether for now.
