FEEDBACK FOR THE APRIL 2019 ISSUE OF DIGIT

Send your
feedback at
editor@digit.in

Hi Team Digit, your team is serving us in a great way and we are able to think better because of you. However there must be many underprivileged people who cannot access the service you provide, but they need to because it is super important. These people have limited resources, and I'd love to find a way to solve the problem together.

If we can organise a program to expand your service and help people, it could cause a chain reaction.

1. Introducing the concepts of Arduino and its applications, and providing it to them
2. They learn and then come up with new ideas and ways to improve their environment.
3. Then they can design a new system, and teach their neighbours, and the system will again produce more people who can help themselves.

The main theme is to spread awareness and give people something that will improve their life. And in spite of your popularity many people do not know about Digit. This small change can make a big difference.

—Raj Kumar Singh

Hi Raj Kumar, we actually do reach out and provide knowledge where we can, and work with several NGOs and not for profits. Also, for a long time we

used to do only English content, until one of our directors made us go big into vernacular languages to make our website content more accessible to more of India. Currently we have a large team of editors who work very hard to translate and also write content in some of India's most popular native languages on www.digit.in, to make sure we reach millions of people more than what only English could.

That said, we can always look to do more, and would love to, but we aren't a bottomless pit of money. In fact, most people don't know it, but we are actually a much smaller company (in terms of financial backing) than almost all of our competitors, and yet we beat them out because our only concern is our readers, and we're here to serve, and not to try and make big money like a corporate.

We would really like our readers to help us achieve goals such as yours. Tell us what you want to achieve in your local district, and who you want to help, and we're happy to provide time and knowledge, and if possible, even some hardware, to achieve the goals. But we need people to be as invested (if not more) in the goal than we are, because simply put, we're not on the ground. You are. If this interests you, get in touch again, and we will happily work out what it is we can do to help you on your noble mission.

—Robert

Dear Team Digit,

I am in grade 9, and yes I am in my new class and I read your reviews on the article of 5G and 6G. I am still thinking what will happen when 10G will come and I have just bought a new PS4 and I am very excited to play on it. Also I noticed that you guys gave a requirements on the game of Devil May Cry 5 so that you should do this on every game and also give the average FPS rate as these would really help people who are gonna buy the game or its rig. A yes from me for the whatsapp group that you are gonna make. What if I want to donate the CDs to someone in need. Also please give the full forms because sometimes I can't understand them. What is gonna happen in the future? Will Digit be a hologram type newspaper? Well, I love you guys so much about your knowledge that I want to buy a lifetime subscription! :-P . Keep giving us these amazing articles in the future also.

—Pranay Chauhan

Thank you so much for your feedback, we really appreciate it.

We try and provide requirements for all PC games, but yes, we might try and give you FPS rates for popular GPUs as well. Let's see what we can do about that.

You should join our forum (<https://geek.digit.in/community/>) or you can post the DVDs for free to people on your social network of choice.

—Robert

Hi, I am Milan. I have been

reading your magazine since I was in 8th std (reached 10th std currently). I found it in the school library once and started to fall in love with your amazing articles. I wanted to check out the Digit dmystify and Fas Track, so I bought one of your annual subscriptions. So what I'm gonna tell you guys are some serious suggestions that can do some damn serious improvements.

Serious suggestions:

1. Please improve the mailing service. I seriously hate the fact that the
