

Googlers claim retaliation

Those who organised the walkout in Nov 18 have claimed retaliation from the software giant. <https://digit.in/may19-33>

MS Paint to stay alive

Microsoft has announced that the image editing software will remain on the Store. <https://digit.in/may19-34>

What makes Apps work in India

India is consuming apps like never before. What are newly popular apps doing right?

Arnab Mukherjee | arnab@digit.in

U

sing an app to perform a task, any task for that matter, is the norm today. From simple tasks like

taking a picture to complex activities like charting stars in the night sky, there's literally an app for everything and we are using apps for all sorts of tasks. And the arrival of every new app or "technology platform" has been held up as a sign heralding the death of an older app but the ground reality has

remained consistently different.

However, not all apps that have taken off, in say the western markets, do well in India. There are certain peculiarities that are unique to each country and we came across some really interesting ones upon observing the Indian app stores. Rather than taking our word for it, have a look for yourself.

WHAT WORKS?

According to the App Annie report State of Mobile 2019, apps worldwide

saw 194 billion downloads. An average user spent 3 hours on mobile apps every day, and the App Store spends grew to \$101 billion - more than the GDP of Venezuela. India has seen a 165% growth in app downloads, powered by lower-end smartphones with good specs and cheaper cellular internet being easily available. Neighbouring China, while encountering slower growth rates at 70%, still accounts for nearly half the world's downloads. However, when you look at
