## Whizzer Kylin A-HEO3

Style and substance, but not for everyone

Price  
₹11,999

**T**

he Kylin A-HEO3 is currently Whizzer's flagship and by the

looks of it, it promises a lot. Each of its parts fits seamlessly together and flow into each other. Without the foam tips, you might experience some external noise flowing in, due to the vents, but not at a level that can be distracting.

There's a triple driver setup on board the Whizzer Kylin A-HEO3. The Knowles armatures are clearly responsible for the mids and the treble, with the single dynamic driver handling the lows. The impedance and sensitivity are both pretty low at 16ohms and 98db respectively, given the drivers in place. You can use these with a smartphone output without feeling the absence of a dedicated amplifier.

If deep and rumbling bass is your thing, then the Kylin will not disappoint you. There's a lot of emphasis on the lower frequencies that make the bass sound deep and powerful, almost downright dark.

The Kylin A-HEO3 is one of the most well-built pair of IEMs we've tried at its price point. The materials used and the finish offered forms up an exquisite combination that is found more often in more expensive units. The sound signature, on the other hand, is where the A-HEO3 shows cracks in its spectacular armour. Individuals who prefer a more balanced sound signature could see it as an inferior option. The Kylin A-HEO3 is by no means bad, and definitely makes a good option for those not looking to nitpick.

—Arnab Mukherjee

### SPECIFICATIONS

DRIVER UNIT: 10mm Beryllium Dynamic driver + Knowles 2BA | FREQUENCY RESPONSE: 12Hz - 40kHz | IMPEDANCE: 16Ω | PLUG TYPE: Angled 3.5mm / 0.78mm 2 Pin | WEIGHT: 4g | SENSITIVITY: 98dB | CABLE: 120 cm 5N OFC+SPC 120mm braided line

## Audio-Technica ATH-M50xBT

A wireless transformation done well

**T**

o give you an idea of how long it has been since Audio-Technica

launched the original M50, it followed the announcement of the first iPhone by approximately a week. In many ways, the M50xBT is identical to the M50x when it comes to design. So if you've tried the M50x, you know exactly what this one's like. Additionally, there's a touch panel on the left earcup's face to trigger the voice assistant on your phone. These wireless headphones have a sound that veers more towards popular appeal than studio quality. The 45mm drivers and the support for aptX combine to aim for high-end sound on a budget. While they never really come close to being recommended for studio mixing, they're quite great for listening on the go and at home.

If industrial design, a stellar battery life, a not so accurate but fun sound signature are things you would like in your next pair of wireless headphones, the ATH-M50xBT from Audio-Technica checks all of those boxes. Without paying too much attention to sounding neutral, the M50xBT is definitely not for studio usage. While noise cancellation would've made a difference with the portable pitch, but the passive isolation these cans offer is quite great. With Bluetooth 5.0 and aptX support in the mix, the M50xBT is definitely worth your money. However, if it does seem too expensive to you, especially compared to the wired version, you have options like the V-Moda Crossfade Wireless at nearly the same price

—Arnab Mukherjee

### SPECIFICATIONS

TYPE: Closed-back dynamic | DRIVER DIAMETER: 45 mm | FREQUENCY RESPONSE: 15 - 28,000 Hz | SENSITIVITY: 99 dB/mW | IMPEDANCE: 38 ohms | WEIGHT: 310 g (10.9 oz), without cable and connector | BLUETOOTH VERSION: 5.0 | SUPPORT CODEC: Qualcomm® aptX, AAC, SBC
