Samsung Galaxy M30

A good buy for the price

The build of the Galaxy M30 looks and feels good in the hand. The back panel is home to a vertically aligned triple camera setup, a single LED flash, and a fingerprint scanner. The Galaxy M30's display is surely up to the mark, considering its price in the market. The ability to lower screen resolution would have helped the battery life. Sound from the Galaxy M30's single down-firing loudspeaker is moderately loud. On the other hand, the earpiece is loud and clear enough for calls even in noisy environments.

Performance on the M30 can best be termed decent. The phone was able to keep up with everyday tasks, and some light gaming without any major struggle. There were noticeable stutters and lags in the animation while switching between apps and tabs inside Chrome. The Galaxy M30 is best bought by those who don't play games heavily or care about gaming quality.

The camera on the Galaxy M30 has its share of weaknesses but fares well with everyday photos, especially in the daytime. Just don't count on it for low light shots. The software makes for an overall pleasant experience while using the Galaxy M30. The phone was lasting over a day and a half on a single charge., which took close to two hours to charge.

The Samsung Galaxy M30 seems to tick most of the right boxes for a mid-range Android smartphone. If you're buying a smartphone for light-to-moderate usage, involving messaging, calling, and some photography, the Galaxy M30 steps up to the plate.

Anker Soundcore Flare

A colourful idea

At first glance, you wouldn't be the first person to compare the Flare to an Amazon Echo. In fact, it wouldn't be wrong to say that the Soundcore Flare has taken some of the best and most interesting features in competing Bluetooth speakers and made them its own. Overall, the Soundcore Flare feels quite well built. It will fit onto your bedside tables, your work desk, even at a nighttime poolside party, all the while giving an expensive impression.

The well-executed implementation of the Light Show feature, packed within a well-designed app, makes it more than a gimmick. Even in the M-Sync mode, its performance is quite consistent and adds to the immersion of listening to music, especially in tracks with punchy, bass-heavy beats. The Flare has been one of the best sounding speakers at its price point. A pair of active drivers and a pair of radiators power the performance of the Flare. It doesn't exactly compete with the best you can get, but for the price, it is going for, it is definitely one of the best options sonically. There are no complaints in the volume department. However, at full volume, the highs begin to sound harsh and distorted, something that the Flare manages to avoid for most of the time.

The Soundcore Flare is a no brainer to recommend. It checks every point on a long checklist and even adds one of its own - good performance, well-built, interesting design and coloured lighting on the bottom that has been done well. It could easily be one of the best speakers to buy under ₹10000 right now.
