

BeamU

Funding: US\$ 14,044 pledged of US\$ 5,000 goal

Link: <https://dgit.in/BeamU>

Putting security as a top priority on any device is the need of the hour. However, for some, that might not be enough and for those people, a device like BeamU is more appropriate to allay their digital security fears. Roughly the size of a credit card, and weighing eight grams, the device serves as a FIDO U2F hardware key, which is set by the FIDO alliance. Functional with a number of services like Google, Facebook, Twitter, Dropbox, Github and more, it allows

users to access a number of services securely using the connecting accessory via USB, or wirelessly via Bluetooth or NFC. There's a navigation touch wheel on board that lets you navigate the BeamU's features and a fingerprint sensor that lets you pick and authenticate actions. Apart from the security key functionality, the BeamU also comes with a password manager that stores all passwords locally and works securely with biometric authentication from you, on PC, iOS and Android. A few other useful features include onboard secure flash memory, Bluetooth based phone tracking and even a few mini-games that utilise the e-ink display on the device. It also comes with a series of useful accessories to use the onboard storage and charge the device.

TOPO Gamepad Mountable Monitor

Funding: \$9,297 pledged of \$2,549 goal

Link: <https://dgit.in/TopoMon>

Console gaming can be cumbersome. First of all, you have the usual massive console chassis that you can't really lug everywhere. Even if you somehow manage to do that, how would you bring a monitor everywhere with you? While the bulk of the console is dealt with by manufacturers releasing 'slim' or 'lite' versions, the TOPO Gamepad Mountable Monitor aims to bring a display to you wherever you are. It isn't a TV, isn't attached to a smartphone and can fulfil a lot of other use cases as well.

With a 7" IPS HD screen that can be connected via HDMI to any console or HDMI compatible device, looking for a TV or monitor anywhere you have a gaming console is a thing of the past. You could possibly drag your console to your bedroom and play in your bed if you felt like it. The bracket that it comes with allows you to attach it onto a controller, as well as use it as an independent stand. It is powered via a 5V micro-USB socket which is compatible with any smartphone charging cable. Topomonitor, the owner of the campaign on Kickstarter, also claims impressive cooling performance. There's also a 3.5mm audio out which you can connect with a stereo system. You get a handful of controls for power, menu and volume at the back. On its own, it weighs just 170g, and the bracket adds another 20g. Custom brackets for either PS4 or Xbox are shipped along with the device.

Feelreal

Funding: US\$ 103,002 pledged of US\$ 20,000 goal

Link: <https://dgit.in/Feelreal>

Feelreal could be the first patented multisensory mask for VR capable of simulating smell, rain, wind, vibration, punches and more. It is an add-on that claims to work with any existing VR headset. The onboard scent generator is capable of creating 255 scents and also comes in game-specific editions after the stretch goals for this campaign was unlocked. Weighing only under 200 grams, it can provide a battery life of about 4-hours. There are micro-coolers, micro-heaters, dual force feedback haptic motors

and mist generators for it to be able to give you the complete flawless experience.

Some of the aromas it can generate include that of coffee, pet, and more. Vibrations generated by the mask can also in-

game events like punches, travelling fast and more. While the Mist slider can be used to generate rainfall or showers, while the heat slider can regulate the fogging of the glasses. The multitude of simulators can not only help increase the immersion but also help you regulate your own body temperature between levels of intense action. It comes with a set of adapters to ensure compatibility with all leading VR headsets. In terms of content, the platform already supports Skyrim VR, Beat Saber and a list of other titles and videos. There's also a Feelreal Video Editor and SDK for Unity and Unreal Engine for you to make your own scent-enabled gaming and video experiences. Delivery is set to happen this year in August.
