

Useless body parts

80 percent of humans still have the pyramidalis muscle, which was used to flex tails <https://digit.in/may19-85>

The Wolf of Wall Street Scam

The making of the movie itself was a money laundering scheme that drained Malaysia. <https://digit.in/may19-86>

mobilised, the planet communicates its desires to the inhabitants, and can either thrive or become sick depending on how it is treated. The Balmera grows crystals which have a range of applications, including as an energy source for *Voltron*. Deep within the planet is a structure known as the Balmera's core, which can destabilise the entire planet if destroyed.

CHIRON

In *Sid Meier's Alpha Centauri*, Chiron is a sentient planet in orbit around Alpha Centauri A. There is a worldwide fungal neural network which has a red colouration, which has given rise to

an entity known as "The Voice". The fungal network along with The Voice regulates the planetary ecosystem. While Chiron is extremely hospitable to flora, the environment is toxic to fauna. The Voice demonstrates a marked distaste for animals, but has a penchant for poetry. In one of the victory scenarios of the game, a faction can achieve transcendence by merging with the planetmind.

MOGO

Mogo is a sentient planet in the *Green Lantern Corps*, and it's most noticeable feature is that the vegetation on the surface is arranged in a band around the world, with the logo of the Green Lantern Corps. The planet has the capability to move across space, and has helped many Green Lantern hosts throughout the years. At times, it can allow races to live on its surface. One of the responsibilities of Mogo is to guide

the rings from dead Green Lanterns to their new hosts. According to a prophecy, Mogo will be the last Green Lantern in the Universe.

EGO

In the Marvel Comics, Ego the Living Planet was created when a dying sun went nova, and every living thing that the cosmic explosion killed was amalgamated into a single giant planet. The planet has a tortuous history, and was even driven mad by the Supreme Intelligence, the AI that heads the Kree race. The Marvel Cinematic Universe version of the character is different from the comic book version, and is kind of a Boltzmann brain that came into existence and evolved to become one of the most powerful beings in the universe.

PANDORA

Pandora from the *Avatar* series, is a sentient world, and is actually a moon of a gas giant called Polyphemus. The moon is rich in biodiversity, and is a host to a variety of plant and animal life. All the creatures on the planet

communicate with a worldwide neural network. The network has enough connections to form what can be considered as a brain, known as Eywa. Eywa can facilitate cross species communication, store and playback memories, and plays an important spiritual role for the inhabitants of Pandora. Eywa keeps the ecosystem of Pandora in equilibrium.

THE EARTH

According to the Gaia Hypothesis, the entire planet is a complex, self regulating system where the organisms in the biosphere interact with their environment over geological time scales, to maintain and perpetrate the conditions necessary for life to thrive on Earth. Humans seem to be turning out to be a cog in this

machine. In Asimov's *Foundation* series, Gaia is a fictional planet that is described along the lines of the Gaia hypothesis. In the Sir Arthur Conan Doyle short story, *The World that screamed*, the Earth is a giant sentient being similar to an Echinus.
