

Signature Acoustics Phoenix

One does not have to be an avid gadget-geek or audiophile these days to face connection woes between various multimedia devices. Even if there is basic connectivity available across your entire eco-system, it is not always at the best possible transmission quality. The Signature Acoustic Phoenix is a Bluetooth audio adapter that provides a large number of connectivity options, aiming to be your one-stop solution for all

connectivity issues. The module can transmit and receive audio signals with the aptX HD codec, which can be selected with a simple toggle between TX and RX on the side. In either mode, holding the button on the top surface assists pairing. For instance, if you want to connect your TV to your Bluetooth headphone, plug in the 3.5mm line out or the RCA cable to the Phoenix and pair it with your headphone to enjoy good quality wireless audio. Battery life varies between 12-18 hours depending on the different input and output mode chosen. Build quality is not its strongest suit with the overall plastic casing being prone to damage if dropped. The audio quality is also quite good and doesn't leave much room for complaining, as compared to what it offers. It also comes with a host of cables right out of the box so that you don't have to run after third-party accessories. For the price that it comes at, the Phoenix is a really useful accessory to solve your connectivity problems without occupying too much space in your multimedia setup.

ALOGIC 6700mAh Power Bank

A power bank doesn't usually make it to this section in our magazine. Unless it is a three-in-one power bank that lets you charge an iPhone with an integrated lightning cable, an Apple Watch with an integrated magnetic charger, as well as any other device using a USB output. The ALOGIC 6700mAh power bank is not the biggest in terms of battery capacity but can definitely cover more ground than any typical power bank can on its own. Each of its outputs is 5V-1A and the micro-USB input is rated 5V-2A. Apart from supporting Apple devices, it comes with an MFi certification. MFi expands to 'Made for iPhone/iPod/iPad' and is the official licensing program for manufacturers of software and hardware peripherals that work with Apple's iPhone, iPad and iPod. The included

lightning cable has a stowaway slot in the power bank itself, which makes it easy to store and less prone to damage. The connector is also good in terms of quality, and we didn't experience any accidental disconnection during our usage. If anything, we wish that the power bank also had an integrated USB charging cable, making this an all-around package for all kinds of accessories.

Additionally, in terms of ergonomics, the power bank could be designed better. It is a bit difficult to hold the power bank while using a connected iPhone, especially with a single hand, which would be possible with a flatter design that many power banks come in. However, the ALOGIC Power Bank is a must have if you're using both an iPhone and Apple Watch, which it can charge twice and six times respectively.
