

Devil May Cry on Switch

Capcom is allegedly bringing over the original Devil May Cry to the Nintendo Switch. <https://digit.in/june19-68>

Solitaire enters Hall of Fame

Microsoft's Solitaire has been inducted into the video game hall of fame. <https://digit.in/june19-69>

lets. And that includes even Apple. No company is free from the evils of pleasing share holders, and that makes them all suspect in our eyes, because shortcuts will be taken. We certainly do not want to recommend that people switch en masse to a platform that's designed to be restrictive and extract as much money as possible from you, even if it happens to be the most privacy respecting ecosystem of all... for now.

We also certainly are not going to suggest that the world throw all their money at what's already the largest company in the world. Monopolies hurt us all in the long run.

Instead, we want to continue doing what we do, and letting our readers know all of the consequences of every choice they make. Some might choose to value privacy enough to cough up a large sum for devices and be locked into an ecosystem, others might decide that they'd rather get a 10 or 15k phone and accept that they are the products that are being sold to advertisers. To ach their own.

As for the forum, yes, most of the new members on there are looking for PC buying advice, but a lot of the old members do indulge in exactly the conversations you want to have. We will also be starting up a few Facebook groups where all of us Digit readers can come and discuss everything science and tech related under the sun. Look out for those.

—Robert

Sir
After reading the first dymstify of my subscription, I really loved it. Though it's great in its own way and topics that you write about are pretty amazing, I've got a few suggestions:

1. Organic chemistry
2. Strange matter
3. Black holes & Neutron stars

Can really tell you a lot more but still, this email doesn't allow it. Please consider it, your response (whether good or bad) is always welcomed.

Thanking you ,
Aditya Khare
P.S: Organic chemistry is a serious request!

—Adil Shah

Hi Adil, glad you're enjoying the dmystify books. We will certainly try and cover those topics as well, but it may take a few months as we plan these things a few months in advance. Watch out for them though... we're just fighting amongst ourselves to see who loses a bet or something and has to write the organic chemistry one... :-)

—Aditya

Hey there! How're you doing? Just wanted to ask if there will be a CTC this year or not. If yes, when? Last year's was pretty much awesome, and I ranked second. I'm kinda prepared for this / the upcoming year. The Josh is

high sir. Looking forward to hearing from you.

Manish Rath

Hey Manish, glad to see you're all geared up for the code cracking. We will start CTC in mid to late June, so prepare yourself. We just want to make sure everyone gets their mags and we can get some cool prizes in place. Watch our Digit Geek Facebook page for details (facebook.com/digitgeek).

—Robert

Dear Sir, I've had the golden opportunity to read the dmystify books, and have learnt a great deal from them, and thus it is my duty to share my praise and appreciation. My favourite topics are: Electricity, ISRO, water, fringe science, game theory, LHC, Mars, dinosaurs, sound, space, gravitational waves, antimatter, subatomic particles, exoplanets, light, the Big Bang, the Milky Way and 30 unsung science heroes.

—Srinivasa Raghavan

Wow! You really do love them all don't you! We are extremely happy to receive such feedback. We'd also love it if you wrote in to suggest some new topics that you'd like to read about in the future, and then try and write those for you. Keep reading, and keep learning!

—Aditya

Letter of the Month

I have a complaint, I got a 503 error message while renewing my subscription. We shouldn't get such error messages after making a payment. While your magazine is high quality, I do not expect such things from your website. Even though this happened, I got an email saying that my subscription was successful.

Please improve this, and I ask the editors to go through the renewal process on the site, and also other such inhouse tools to revamp the site experience. Also, while trying to renew, I got a message that says the site is not safe.. I think since https is not used, that message is given.

Most people might not proceed to give their credit card information after seeing that message.

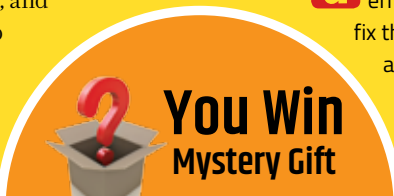

The site has improved over the years, but it still requires a lot more work. Also, the confirmation email that is sent out still mentions thinkdigit.com, and it's been years since you moved to digit.in. The messaging seems full of errors too...

—Gaurav Khurana

Thanks for pointing out these embarrassing errors. There are no excuses for this. We shall fix these errors ASAP. I shall do so personally as I am in india currently. Thank you for being so loyal a reader, so as to continue despite all of these embarrassments.

—Robert
