

DOES THIS SECTION
EVEN NEED AN
INTRODUCTION?
FROM COMPUTERS
TO MOBILES, AND
HEADPHONES TO
GPUS, IT'S ALL
HERE...

THIS MONTH IN TECH:
This month we covered
the process of UI design
in India and also delved
deeper into the repair-
ability of the Huawei
P30 Pro.

Broken Firefox extensions

A technical glitch on Firefox
caused all extensions on the
browser to stop working.
The cause was found to be
an out-of-date certificate.
However, a fix for the issue
has already been deployed.

WHAT'S NEW

China bans Wikipedia

C China has gone ahead, and in a rather
radical move, completely banned the
community-fed online encyclopedia,
Wikipedia, in all its available languages.

The site was initially banned in the country,
however, it was only the Chinese version that
was banned, and specific pages with search
terms that were deemed sensitive, such as
the Dalai Lama and Tiananmen massacre.
However, now they have taken it a step ahead
and completely banned the website itself.

The block has, apparently, been in effect since
late in April of this year. The Wikimedia founda-
tion stated that it did not receive any notice of

the censorship in
advance, unfor-
tunately. Wiki-
pedia becomes
the latest site to
join the long list
of already banned
sites in China. This
has forced users
to use VPNs or
Virtual Private

Networks to get over what is being
called the "Great Firewall" of China.

Google pulls Android support for Huawei

Following the addition of
Chinese tech giant, Huawei,
to the "Entity List" in the United
States because of fears that
the company is spying on the
US for the Chinese government,
US companies are pulling all
support for the Chinese smart-
phone brand.

Google being one of the US
companies, has pulled Huawei's
Android license, which could
deal a big blow to the phone-
maker and its position in the

smartphone industry. A Google
spokesperson speaking to
Reuters said that, "Google Play
and the security protections

from Google Play Protect will
continue to function on existing
Huawei devices." So if you

happen to own a Huawei phone
you don't need to worry yet. It's
likely that future updates and
such for existing phones will be
impacted, however.

As an alternative, Huawei
will have to fallback to the
Android Open Source Project
(AOSP), meaning it will lose
access to all the critical Google
apps and services, stuff that
we're used to on all regular
Android devices.

Tor in Firefox

Mozilla has been looking
for a way to integrate
Tor into Firefox, and is
offering a research grant
to get the job done in an
efficient manner as well.
Currently Tor can be used
with Firefox, however,
it slows the browser
down significantly.

\$1m for virus- ridden laptop

An artist is auctioning off
a laptop that's housing
some of the nastiest
malware to ever exist in it.
It's titled "The Persistence
of Chaos". It supposedly
contains six of the most
dangerous malware to
ever have been created.

3D printed Village

The world's first 3D printed
village is coming to Latin
America. The goal of the
project is to eradicate global
homelessness across the
entire world. The project is
targeted towards people
living in multigenerational
homes and on less than \$200
per month.
