

## SECURITY WATCH

## Cryptojacking rises at an alarming rate

**A**ccording to the NTT 2019 Global Threat Intelligence Report, cryptojacking, also known as cryptomining or illegal cryptocurrency mining, has increased at a staggering rate. In just the past year, cryptomining has gone up by a whopping 459 per cent. In 2017, it replaced Ransomware as the most popular cyberattack method.

Cryptojacking is still in its infancy stages, which could explain the alarming increase in nefarious activity in the past year. However, many organisations were still caught off-guard by the sizeable amount of hostile activity or cryptojacking detections in this area. The technology and education sectors are at the highest risk for cryptojacking attacks, accounting for about 86 per cent of all cryptojacking detections.

## MOBILE WATCH

## Nubia Red Magic 3

**T**he Nubia Red Magic 3 is one of the prime candidates to become a flagship killer in 2019. Powered by the Qualcomm Snapdragon 855 processor and the Adreno 640 GPU, the smartphone scores a massive 437,524 on Antutu, which is the highest Antutu score ever seen on a smartphone. The Red Magic 3 also comes with a 90Hz display and an inbuilt fan. The display can switch automatically between 90Hz or 60Hz refresh rate by analysing the intensity of the games being played on the device. Backed by a massive 5000mAh battery with 27W fast charging, the device leaves no stone unturned with impressive features like 48MP primary camera, 8K video recording and 1920 fps slo-mo videos.

## APP WATCH

## Battery Notch

**D**espite there being a considerable number of newer smartphones attempting to remove the notch in creative ways, a sizeable number of people have already bought these 'notch-ed' devices and do not foresee upgrading their devices for a while. Might as well make the eyesore (the notch) more useful then. Enter Battery Notch, an app on Android, that allows you to transform the border of your notch into a cool-looking battery indicator. There are many apps out there that do the same thing, however, since differ-

ent OEMs sport notches of different shapes and sizes, it can become difficult to find a good app that is an all-rounder and works for notches of multiple shapes and sizes. Battery Notch is one such all-rounder.

The battery indicator is actually in the form of a background frame for the notch and this frame reduces as the battery percentage drops to mimic the current battery level. This app will work on all devices running Android 8.0 and above (the app

is not available on iOS), irrespective of the type of notch, as mentioned earlier. The app allows you to adjust the size of the overlay and its positioning (meaning you could use it for off-set punch-out notches like the Samsung Galaxy S10's). This app is quite functional since it provides the user with a more visual indicator of their battery level in contrast to the tiny numbers or battery level indicator icon that usually resides in the corner of the screen.

## Scribbl

Scribbl can be used to make your stories more interesting and aesthetic. Scribbl allows you to draw animations on images which will make your pictures stand out from the rest.

## Rise

Rise allows you to take control of your sleep quality and schedule by offering a series of relaxation techniques like mindfulness meditation, commitment therapy, guided imagery and muscle relaxation.

## Zoho Show

Zoho Show lets you create professional-looking presentations from your phone. It allows collaboration and you can cast the presentation to a supporting device on the same network.
