

**BUILT IN
AIR PURIFIER**

**99%
ODOUR & VOC REMOVAL**

**REMOVES
98 % HARMFUL POLLUTANTS***
**like PM 2.5 and Bacteria*

**LOWEST
MAINTENANCE
EGAPA FILTER**

Mode, for example. If you've used an AC during a hot summer's night then you'll have experienced a few undesirable effects such as the bright LEDs or the sharp beeps that can jolt you awake. You won't experience that with Livpure. Firstly, you have a hide-display feature that switches off the temperature and notification LEDs. Secondly, should there be a power-cut then the AC will remember the last recorded mode and switch to that so that the temperature gradient is maintained throughout the night. And lastly, you don't have to switch on the lights to hunt for the remote since the buttons glow in the dark, not too brightly but just enough for you to spot it. Super convenient!

And what if you have more than one Livpure Smart Air Conditioner in your home? The HEKA app links itself to both ACs and gives you complete control over all its features. You might as well do away with the remote control altogether.

COOLER

The Livpure Smart Air Conditioners make use of Dual-inverter technology which makes them way more efficient at cooling quickly while also saving power. Dual-inverter air conditioners have a powerful BLDC motor which helps tune the speed of the compressor such that temperature is controlled in a precise manner. This way, the ambient temperature in the room remains the same unlike what is seen in non-inverter ACs. You'll no longer experience jarring temperature changes wherein you're freezing in one moment and feeling hot right after.

All Livpure Smart Air Conditioners use 100% copper condenser coils to help increase the cooling efficiency. Copper has long been the poster child for heat transfer mechanisms because of its high conductivity and durability.

Non-inverter ACs switch the compressor on or off based on the temperature, this constant switching results in large temperature fluctuations and also consumes more power. Dual inverter ACs are better in both aspects. At the

EGAPA uses a dual stratified filter technology which has the capability of filtering particulates up to 0.3 microns. This takes care of even the harmful bacteria that are often rampant during the changing seasons.

GET SMART, GET LIVPURE

As someone who works hard all day or even through nights, you've earned the right to come home to a comfort-

Models available in 1 Ton 3-Star, 1.5 Ton 3-Star and 1.5 Ton 5-Star variants

end of the day, Livpure Smart AC prioritises your comfort without sacrificing on energy efficiency.

CLEANER

Livpure Smart Air Conditioners come with EGAPA filters to purify the air of all harmful pollutants, particulates, VOCs (Volatile Organic Compounds) and even pesky odours. EGAPA is a patented filter technology from AirOK. It stands for Effective Granular Absorption Particulate Arrestor and is proven to be very effective, enough to ensure 99% odour and VOC removal, and even 98% of harmful pollutants which can be as small as PM 2.5.

able environment and put your legs up for a few well-deserved hours of rest. The convenience afforded by a smart device, no matter what it is, goes a long way in giving you a wonderful experience. In the world of air conditioners, Livpure might just be what you're looking for. Given all the features it has, it appears to be smarter, cooler and cleaner. Wouldn't you want that for yourself? ■
