Teardown: Huawei P30 Pro

Repairs made easier with modular components

Dhriti Datta | dhriti@digit.in

Acoustic Display Technology

The screen itself works like a vibration speaker. The module is glued onto the back of the screen, however, raising concerns whether the speaker will continue to function if the top half of the screen shatters or cracks.

Two way wireless charging

The wireless charging coil is attached to the motherboard cover. The Huawei P30 Pro, much like the Mate 20 Pro, is capable of wireless charging as well as reverse wireless charging.

The saga of multiple cameras continues

The Huawei P30 Pro houses five cameras. A 20MP ultra wide-angle camera, a 40MP wide angle camera with a Time-of-Flight camera, an 8MP telephoto camera with 50x zoom and a new periscope type module. It also has a 32MP selfie shooter. The telephoto lens' module is rotated at 90 degrees from the aperture to avoid a massive camera bump.

Modular USB-C port

The USB Type-C port is easily detachable from the daughterboard. The modular nature of the phone's components makes for expedited repairs.
