

Swearing Roomba

A new version of Roomba has been designed which swears when it bumps into objects. <https://digit.in/june19-25>

Pay for apps in cash

Google is rolling out a payment option for Android apps where users can pay for them in cash. <https://digit.in/june19-29>

Tightly-glued glass body

The Huawei P30 Pro houses a glass body. The distance between the screen or glass and the frame is almost non-existent making it extremely hard to pry away from each other. The curved edges of the display make it even harder. Repairs become extremely difficult, and the phone is more prone to screen damage or breakage.

Huawei P30 Pro

Removable battery facilitated by easy-pull tabs

As seen in the Mate 20 Pro, the P30 Pro also comes with pull tabs on the battery which allows easy removal of the battery, instead of having to grapple with the glue. The battery housed in this device is 4200mAh and delivers a capacity of 16.04Wh.

Optical in-display fingerprint sensor

The Huawei P30 Pro houses an optical in-display fingerprint sensor which is mounted close to the bottom edge of the device. Optical sensors are exponentially faster than the ultrasonic sensor present in the Galaxy S10 line.
