

18 FICTIONAL DEVICES THAT WE WISH WERE REAL

We'd love to see a host of fictional gadgets in real life, but unfortunately, we either haven't caught up in terms of technology, or they're simply too farfetched to ever become a reality. Who knows, maybe 100 years down the line, what we think of as impossible now might be a mundane reality then.

01 THE SONIC SCREWDRIVER

The Sonic Screwdriver from Doctor Who is arguably the one tool to rule them all. Imagine, a single tool that can unlock just about anything, and can interact with any computer or electronic device!

While we're nowhere near that level of efficiency to make this exact device, scientists have been working on a form of the sonic screwdriver using focused sound waves. Using focused sounds, the prototype sonic screwdriver is able to pin objects in the air, in place.

02 THE POINT-OF-VIEW GUN

The PoV gun from the Hitchhiker's Guide to the Galaxy is an incredibly powerful weapon. But at the same time, it's quite a non-violent weapon. It makes the

We've seen a LOT of cool stuff in movies, video games, TV shows and more. Ever wish any of them were real? Here are 18 fictional devices Team Digit wishes were real.

Manish Rajesh | manish@digit.in

person you shoot with it see things from your point of view. We're sure it could be used to prevent wars, but we'd probably just use it during one of our test lab squabbles, which we totally don't have every other day.

03 IRON MAN'S SUIT

Iron Man's suit, from well, Iron Man, packs a lot of features that make it very desirable. However, just the fact that it looks cool is enough for us to want it. Apart

from looking cool, it can enhance your strength, allows flight, is immune to just about every kind of gunfire, folds up into a suitcase AND comes with its own AI. We definitely would(n't) use it to fight crime. We'd also probably blow something (or someone) up with cool palm lasers too.

04 THE BABEL FISH

We're not really sure if this counts as a gadget. Well, it does something that we definitely would want from a gadget in the future, so we'll let it pass. If you've watched The Hitchhiker's Guide to the

Galaxy, then you know that this small, yellow fish sits snugly in your ear, and interacts directly with your brain to translate just about any language into one that you'll understand. Imagine

never needing to learn another language ever again but still being able to communicate with just about anyone in the galaxy.

While we don't have galaxy levels of on-the-fly translation, we've certainly got a few gadgets, like the Google Pixel Buds, that are capable of translating some languages in real time.

05 PASIV DREAM MACHINE

The PASIV Dream Machine from Inception allowed Leo and team to hijack the dreams of others and acquire the information they needed, leaving the victim none-the-wiser about what happened once they had woken up.

While in the movie they used it for far more serious stuff, we'd use it to mess around with our friend's dreams.
