

what you're seeing without looking suspicious. We imagine this would be a great way to cheat at exams, albeit, incredibly expensive. But that's not all,

imagine having a HUD, like you do in video games, and only needing to look at things to learn more about them. The possibilities are endless.

13

FUTURISTIC COMPUTER

Minority Report came out way back in 2002, that was before the touchscreen era. Their vision of what a futuristic computer should look like still stands out though. And we still definitely want a computer with 3D holographic screens which we can interface directly with our hands. This is the kind of futuristic tech that we just can't wait to get our hands on. Imagine what gaming would be like. Hopefully, we might

actually see something like this in our lifetime. Fingers crossed.

14

THE HOLODECK

The Holodeck from Star Trek is what VR aspires to be. A room which can simulate environments and holographic objects that you can actually interact with. What separates the Holodeck from

the latest VR tech we have right now is that the Holodeck employs all 5 of our senses. If we were to simulate a beach in the Holodeck, it would actually feel like we were at the beach. We would be able to feel the grains of sand under our feet and the sun on our skin. Stepping into the water would make us wet, fake wet probably, but we'd definitely feel it. Imagine being able to visit any destination you wanted and feeling like you're actually there, right from your doorstep. That's what a Holodeck offers. Definitely changes the meaning of the word staycation, doesn't it?

15

THE GRAVITY GUN

The Gravity Gun, or the Zero Point Energy Field manipulator, from the Half Life games would be one super convenient gun

to have around. Just imagine, having one of these devices lying around means that you'll have no more trouble moving heavy stuff around. No more breaking your back moving heavy furniture, or picking up the sofa to clean under it. Feeling real comfy on your couch and too lazy to get up and get the TV remote? Just use the Gravity Gun. That's the kind of life we aspire to live.

16

THE PORTAL GUN

In addition to having great utility, we'd love a Portal Gun just for all the fun we could have with it. If you haven't played the games, they're incredibly fun and they'll challenge your brain too, give them a whirl. If you've got a friend, then play co-op! If you know what we're talking about then you already know the kind of fun we could have if we had actual Portal Guns to mess around with. Probably keep one portal active inside the refrigerator, for when we need quick access to a snack.

17

THE REGULATOR

Being able to manipulate your size comes with quite a few perks. For one, there won't be a single ride at the amusement park that you won't be able to ride. Then there's the advantage of being able to "disappear" quite like the cloaking device above. By "disappear" here we obviously mean shrinking to a tiny size and scooting away. Oh, then there's the fact that it works on more than just yourself. Got a heavy bag that you're having trouble carrying? Shrink it, put it in your pocket. Got a cool Darth Vader miniature that you wish was bigger? No problemo, bump that mini up to full-man size. Then sell it for some mad cash. No? I guess that's just us then.

18

THE REPLICATOR

If there was one gadget on this list that we really wanted it would be this. The Replicator from Star Trek. Just imagine being able to create ANY non-living object in existence, anything at all. Just like that, right in front of you, from out of

nowhere. If Replicators existed, well, materialism would probably die. So would the economy, we're thinking. Actually, a lot of things would just go right out the window, wouldn't it? Who cares, at least we'll have the best rig on the planet.

What fictional device do you want to see in real life? Tell us by writing to us at editor@digit.in.
