HIRING EXPERIENCED WORKERS

It is very possible that a new recruit in your company has faked his resume. All past work experience shown in resumes and LinkedIn is filled out and written by the job candidates themselves. The HR will then be tasked with the tedious task of verifying the candidate's claims by calling all his past employers. Echolink is a startup that aims to provide true transparency for the job market. It verifies the candidate's skills and work experience which have been stored on a blockchain network. It makes the recruiting process easy and seamless.

RENT OUT YOUR PARKING SPACE

In an overcrowded country like India, parking space is often a nuisance to find. People would love to have a service that would let them

You can earn money by renting out your parking space using blockchain

find, secure and pay for a parking spot before driving to an overcrowded place. Using blockchain, people can rent out their unused parking space to people who need it temporarily. This is useful for folks that have left the town for a while since it allows them to earn a little cash on the side for renting out something they wouldn't be using anyway. Parkgene is a website that uses blockchain archives to rent out

parking spots around the country to people that immediately need them.

14

LOWER ELECTRICITY BILLS AT HOME

Blockchain technology has the ability to make electric grids, that are vulnerable to cyber attacks, more secure and it also can give users heightened control over their power supply - where it comes from and how much it costs. The overall cost of power can be reduced dramatically by eliminating transaction costs which are sizeable. Accenture has revealed a smart plug to save costs and monitor power usage. It searches for the cheapest energy tariffs and uses blockchain to switch suppliers quickly which ultimately lowers overall electricity bills.

15

ALLOWS PAY-PER-USE VIEWERSHIP

Video content providers love to charge a monthly fee or subscription price which allows users access to all the content on their platform. Sometimes, customers will refuse to subscribe to such services because they are not interested in all the content the platform provides and possibly only want to watch one TV show. Blockchain allows pay-per-use model which lets users pick something to watch on the decentralised video distribution platform and pay only for the content they have consumed.

16

DISCOVER THE ORIGIN OF YOUR LAMB MEAT

With blockchain technology, you can now discover the origin of your lamb meat and track it from farm to fork. A company called Provenance has started this venture to introduce transparency in the meat market. Consumer interest to know the origins of their meat has increased considerably since they want to know and understand the quality of the meat they are consuming. The company is able to divulge all kinds of relevant information about meat like its origin, history and rearing practice by storing this data to a blockchain network. Customers can access the data by scanning a QR code on the package of the meat.

The meat enthusiast in you really wants this information, blockchain provides it.

17

RENT OUT UNUSED HARD DRIVE SPACE

Paying for cloud storage can get quite expensive in the long run. The uptime for cloud storage is pretty decent, however, users are plagued by high chances of downtime due to DDoS attacks and outages. Additionally, data on the cloud is not really private and secure since it is duplicated across multiple data centres. Enter Storj.io, a cloud share space by the community, for the community. It features lower cost, a higher level of privacy and more reliability because of its decentralised blockchain system. The platform has the unique ability to use the free capacity of storage nodes, whether it is a single PC or multiple. You can even get paid by renting out extra hard drive space you have lying around to people who need it.

18

HOST WITHOUT A CENTRAL SERVER

How great would it be if your online content doesn't need any central server? It would solve issues like the inability to access content when your website is down. Zeronet creates a completely decentralised internet. It sidesteps the need to host websites on servers by dumping the website information all over the internet in small pieces. These pieces are then linked together using blockchain registry. This completely eliminates web hosting costs and allows the ability to access online content, on your website, at any time.
