Imgur intends to integrate micropayments and introduce a premium tier. <https://dgit.in/july19-86>

Autodelete location data

Google is going to let users auto delete location data after three or eighteen month intervals. <https://dgit.in/july19-87>

>> FEEDBACK FOR THE JUNE 2019 ISSUE OF DIGIT

Send your feedback at editor@digit.in

Greetings, humans at Digit, This month was one crazy month as I was looking to get admitted into a college and had applied to more than half of India's colleges and was running around to get too all entrance tests and interviews. In the midst of this crazy college drama I picked up a Digit magazine. Something I hadn't done in the last 2½ years (Yea, we were on a break). Sorry about that. After my subscription ended I just got caught up in 11th and 12th and I just never got a chance to renew it. And what better time to re-dive into Digit than on your 18th birthday! And I must say, even after such a long break the feel of Digit and the experience has only improved, maintaining the things that readers have always loved and adding new and exciting things so we can indulge better. The feeling of ripping open the magazine from it's elegant covers excitedly yet gently, quickly going through to see what I'm gonna read first, and one of the weirdest things I do-smelling the magazine pages over and over (admit it, we all do it!) have all remained the same. Thank you Digit for existing! You guys are as breath-taking as Keanu Reeves. I've decided to renew my subscription as soon as I get settled into a hostel and will never forget to renew my subscription and it will continue to be in my family for

generations to come! Here's to another 100 years of DIGIT!

PS: I noticed some errors:

On page 35 under Digit Top 3 buys the section 'Business laptops under 1,00,000 shows laptops way above one lakh!

Then Top 3 android smartphones shows Apple iPhone XS Max! :-(

—Rohan Shah

Sorry about the errors, looks like we changed the categories and forgot to update the category name. We feel stupid now.

—Robert

!HELLO to the "DOMINATORS of INDIAN TECH"!!! I was reading the dmystify on my way from school of the May edition (Had got it on June 2nd) and when I entered the house and saw the digit covering on the table I was like "OMG did they fix the mailing service!" (not the most exciting part). When I tried to open the fresh pack it felt a bit heavy on my palms. To my surprise that it was June and you guys had special edition; I was so excited. I quickly checked out all the content. Loved the fact that you guys provided Kali Linux on DVD because right on that day I had asked my friend if he had kali distro with him. The top 18-s were amazing although I haven't read all of

them yet and the ethical hacking guide taught me a lot. I started by reading Robert's RSS feed section (first thing I read nowadays in the magazine) and wow that was an amazing story. The only fact that I would want to pin point is the cover of Fas Track. Hey Digit in which decade was the backcover even created. And the picture on the covers inside too. Really? Please change those. I hope you guys will fix that. And how about naming the DVD 'digivd' or e-git (`w`). I used to watch a lot of anime. Loved seeing Tate no yusha on the list. Can you guys make programming guide for beginners on a particular language like c++ or js on Fas Track? Or... you could make it exclusive for Digit subscribers. ^.^ Finally KUDOS to all in Digit for the 18th anniversary.

PS- thanks for fixing my mailing issue. I wish another successful 18 years for digit.

—Milan Muhammed

Thanks for your feedback. We have actually done C++ in November 2008, PHP in Jan 2009, Ajax in April 2009, Java in Jan 2011, .Net in Feb 2011, etc. You should check out the Digit archive. As a subscriber you get free access to it, just send in an email to archive@digit.in requesting access, and our good little Digit AI should send you the link for it.

—Robert

Hey to the Digit team, I've just read the 18th anniversary magazine and its awesome like always. I've been reading the magazine from 2010 and ever since I've fallen in love with it.

I want to thank you for all the effort and hard work you put in for us. I'd like to end this message by saying that I'd love to see more content on A.I. projects tutorials and stuff and I really want to see the AR feature on the SKOAR! magazine where you scanned to interact I miss that.

—Rivek Tamang

Hey Rivek, Thanks for sticking with us for
