Facebook launches a new app that pays users for data

Facebook launched its new app, Study, which will be an odd but actual revenue stream for users who choose to share their information with the social media giant about the apps they use. It is interesting to note that the company has previously launched two similar apps but they were both shut down after they drew a fair amount of criticism for infringing on privacy and even violating Apple's App Store guidelines. Study is only available the Google Play Store and is on an invitation basis only. The app will collect information about what apps participants are using, for how long and which app features they use – all of which offer Facebook insight into how people use their competitors' services. The company has maintained that they won't track passwords or IDs.

MOBILE WATCH

Nokia 9 Pureview

The Nokia 9 Pureview was recently certified by the BIS (Bureau of Indian Standards), which suggests that its launch is imminent. The device is expected to launch in India on June 28. The Nokia 9 Pureview is one of the most anticipated smartphones of 2019 with its penta-camera setup. Reviewers around the world have sung praises of the penta rear camera set-up and the device's ability to capture RAW photos. The five-camera set-up includes five 12MP f/1.8 sensors where three offer monochrome sensors, and two have RGB sensors. It also sports a 20MP selfie shooter. It houses a Qualcomm Snapdragon 845 processor, 6GB RAM, 128GB internal storage, Android 9 and a 3,320mAh battery. The device is expected to retail at around ₹50,000.

APP WATCH

Adobe Premiere Rush

Adobe recently launched Adobe Premiere Rush which is a video editing app geared towards YouTubers and other video content creators. The app features exporting options that have been optimised for every social media platform including Instagram, Snapchat, Facebook, Twitter and Vimeo. It is being branded as an all-in-one video editing program for budding YouTubers and influencers. The app allows users to edit videos

easily, on-the-go with features like motion graphics and audio mixing. These features are present in Adobe's professional software like Premiere Pro, AfterEffects and Audition.

music during voice-overs. Rush is powered by Adobe Sensei, an AI framework that is built into the Creative Cloud Platform. Additionally, Premiere Rush files are also compatible with Premiere

Pro so you can pick up where you left off even if you switch from mobile devices to your PC. Rush is included as a part of a series of Creative Cloud memberships. There's also a paid upgrade where you get unlimited exports, Rush on all

You get a neat little one-click auto audio mixing feature that automatically controls the volume of background

your devices (PC, mobile and tablet) and 100GB of cloud storage for 9.99 USD per month.

Playbook

Playbook is a marketplace app where trainers, influencers, celebrities and athletes divulge their latest workout programs, nutrition plans, and even coach users.
