

reset the feature without having to wait for it to learn the right behaviour. Head over to Settings > System > Advanced > Reset Options > Erase all data. It is a nuclear option, but Google says it is the only way to wipe out everything the Adaptive Battery system has learned over time. However, it will begin learning fast again and enforcing battery-saving knowledge. Use this method as a last ditch effort since it is extreme.

KEEP YOUR PHONE ON WITH FINGERPRINT SENSOR

As long as your phone has a traditional fingerprint sensor and not one of the new in-display fingerprint sensors, you can use this feature on Android Pie. Smartphones generally have a time limit that is selected by the user after which the screen will automatically time out and shut down if no activity is detected. This sometimes happens at inconvenient times like when you are reading a long article or watching a video on a website. To avoid this, you can simply touch

Lockmode mode isn't present originally, you need to activate it

your finger to your fingerprint sensor, even if it is for just a split second, the screen will keep itself from timing out and going dark.

TURN OFF HOTSPOT DIRECTLY WHEN NO DEVICES ARE CONNECTED

This feature is usually on by default on Android Pie devices. Android 9 will turn off your Wi-Fi hotspot automatically if no devices are connected to it at that point in time, so you don't have to worry about wasting power. In case the feature isn't active on your Android Pie device, you can look at the Network and Internet section in Settings and select Hotspot and tethering > Wi-Fi Hotspot > Advanced. Then you need to make sure that the toggle next to 'Turn off hotspot automatically' is on.

LOCKDOWN MODE

Lockdown mode on Android Pie disables all Smart Lock and biometric security options and then will require you to enter a PIN, password or pattern to enter your home screen. The idea is to keep anyone from being able to force you to unlock your phone with your finger, face or another such method. To activate it, you

to use it, press and hold the power button and activate the 'Lockdown' command.

ALLOW CERTAIN CALLS AND NOTIFICATIONS DESPITE DND BEING TURNED ON

The Do Not Disturb feature on Android 9 Pie can be tweaked significantly when you want to. The feature in

to this issue which works when auto-rotate is turned off, just as many people prefer it. Suppose you're using Chrome, like the image below, and you flip your phone to view the website in landscape mode, a small icon will appear at the far right of the navigation bar that resembles an auto-rotate icon. Tap it and the phone's orientation will be locked in

Quick toggle to rotate your screen even when orientation lock is on

general blocks all call and message alerts and notifications as well. However, if you want to specifically receive calls from a group of contacts, you can tweak DND mode to incorporate these changes. In the Settings menu, locate Do Not Disturb and then tap on the feature to select what contacts are allowed to ring through. You can also set up tweaks where a caller will be allowed to pass through the DND mode if he has called more than once in 15 minutes.

ROTATE YOUR SCREEN EVEN WHEN AUTO-ROTATE IS OFF

Smartphones use accelerometers to change orientation depending on which way the device is being held. However, we've all witnessed its sensitivity which sometimes causes false switches, especially when you're lying down. This is why many people turn auto-rotate off. In Android Pie, there's a fix

landscape mode. Flip your phone upright and the icon appears again.

AUTOMATICALLY ENABLE BLUETOOTH WHEN DRIVING

This handy little feature is hidden away in Developer Options, which can be enabled by following the instructions in tip number one. Once developer options are activated, you can navigate your way through them and find the option 'Feature Flags'. Tap on that and you will see an option that says 'settings_bluetooth_while_driving'. Press the toggle next to it to enable this feature. This will add a new option in 'Connection Preferences' that says 'Use Bluetooth when driving'. Enable this and your device will turn on Bluetooth every time it gauges that you are driving. This feature is available only on Pixel and other stock Android devices.
