Apple iPad Air 2019

Is the 2019 10.5-inch iPad Air the right iPad for you?

The iPad Air has typically been for those looking for a great content consumption device. However, this time around, it has Apple's flagship chip, supports the first gen Apple Pencil and Apple keyboard. It is almost like the first gen iPad Pro without the quad speaker setup. Is it this the right iPad for you? Let's find out.

Build and Design

The iPad Air has become slimmer with slightly more rounded edges. We get touch ID on the iPad Air while Apple's Face ID is reserved for the iPad Pro.

The front of the device is clean with only the home button cum Touch ID and the front camera. We got the Silver iPad Air for review but is available in Space Grey and Gold as well. At the back, you have the apple logo and the camera without a flash. You also have a headphone jack, a volume rocker and the lightning port along with two speakers on the device. On the left, we have the connector for the Apple Keyboard and the smart cover. The body of the iPad Air is solid aluminium and the build quality is top notch.

As far as the design of the tablet is concerned it is ergonomic and easy to hold for long hours. The only downside is the smart cover. It fits snug on the iPad and protects the display but still only has only one angle on which the iPad Air can rest.

Display and Audio

The display on the 10.5-inch iPad Pro is fantastic. The resolution makes the content look crisp and it supports Dolby Vision. The vibrancy in the colours is definitely something to take note of. The colour and visual fidelity of the content is unmatched. We recorded a maximum of 550 lux on our brightness meter.

We used the display under direct sunlight and it works quite well. It is

Price
₹23,999

reflective at times, but nothing that can't be taken care off by moving it around.

Coming to the audio, the iPad Air gets 2 speakers, both firing in the same direction. The speaker setup could have been on either side of the display to give a stereo experience. Nonetheless, the speakers are loud, clear and perform well even for watching movies. Dialogues are crisp, even in situations where there is a background score, or loud explosions. The speakers do a good job for FaceTime calls and music as well.

Performance

When it comes to everyday performance, like checking mail, browsing the Internet, watching videos, etc. the tablet without any stutters. It even works very well when you use apps in split screen. iOS is designed for the iPad and will also be upgradeable to the upcoming iPadOS 13. If you are a Mac user, then there are a lot of convenient ways to move content from one device to the another like AirDrop.

With iPad OS 13, you will be able to use your iPad as a second display without the need for a third party app.

There is nothing we could do on the iPad to make it stutter, lag or freeze. From PUBG to Dead Trigger and more, every game we played on the device worked exceedingly well. As of writing this review and running the device on iOS 12, we don't think the device is a replacement to your PC, yet. But that may change with iPadOS 13.

Battery

The 10.5-inch iPad Air has an 8134mAh battery. Playback from streaming services with brightness set to max and headphones plugged in saw a drop of 6-8 per cent in one hour based on the streaming service. Local playback saw a 5-7 per cent drop per hour.

Drop the brightness a little and you have a device that can playback content for almost 15 hours. Gaming drained the battery faster though, with drops of around 15 per cent per hour.

Apple iPad Air 2019 Verdict

The iPad Air is a fantastic device for content consumption, playing games and running a host of different apps. It has swift performance and the display is a treat. The battery life and touch response is good too. The sound output from the tablet is good. However, it doesn't have stereo separation when watching movies and it does not support the second-gen Apple Pencil.
