OnePlus 7 Pro

A premium flagship device in almost every way

The OnePlus 7 Pro is in almost every way a premium flagship

device, not just for its price, but also for its features. It packs the very best of whatever is available today and addresses the shortcomings of its predecessors.

Build and Design

The OnePlus 7 Pro is a chunky smartphone. The phone weighs 206 grams and is 8.8mm thick. The finish is smooth to the touch and just barely holds fingerprints. But the back is somewhat slippery. There's still no IP rating on the phone. The phone houses a pop-up selfie camera and volume rocker. The power button is on the right side, along with the signature OnePlus Alert Slider.

Overall, the OnePlus 7 Pro has solid construction with the back glass, the metal frame and the display blending in incredibly seamlessly.

Display

The OnePlus 7 Pro has a display resolution of 1440 x 3120 and 516ppi. There's also the HDR10+ certification which will allow you to stream HDR content. Another notable feather is the 90Hz refresh rate.

The max brightness on this panel is 742 lux, which puts it in the fairly high range. The lowest it will go is 7 lux, which is dim enough to let you use it in pitch darkness without straining your eyes. Using the phone outdoors, its peak brightness of 742 lux proves to be more than adequate.

Performance

Our review unit of the OnePlus 7 Pro comes with 12GB of RAM. The Phone runs on Qualcomm's latest Snapdragon 855 chipset.

Looking that the numbers, we are surprised to find that Samsung's Exynos-powered S10 series, all outpace the OnePlus 7 Pro's CPU benchmark numbers. Gaming on the OnePlus 7 Pro, expectedly, is an absolute treat. However, we noted some significant heat build up around the camera module.

Camera

The camera on the OnePlus 7 Pro now comes with triple-camera setup, featuring the Sony IMX 586 sensor for the primary camera, a 3x telephoto lens mounted on a 13MP sensor and a 16MP ultra-wide camera.

The primary camera works well, producing incredibly sharp, consistent images in the 12MP mode. The photos have an

impressive dynamic range, which is in part also due to the HDR algorithm. The low light photos from the OnePlus 7 Pro are also usable with some clever editing. The ultra-wide lens shoots impressive wide shots but appear to have less clear edges in comparison to the centre of the photo.

The telephoto lens was surrounded by controversy, since it was using a portion of the 13MP sensor to achieve the advertised 3x field of view. The results are visually okay, but we're not too happy about the usage of technological loopholes. Overall, with a lack of access to any lens in the Pro mode

and RAW capture only producing 12MP images, there is a LOT of room for improvement here.

The OnePlus 7 Pro houses a 16-megapixel pop-up selfie camera with an aperture of f/2.0. The mechanism is fast enough to not feel annoying. The concern is how long would the lens remain scratch-less.

Battery

The OnePlus 7 Pro packs a 4000mAh battery. Interestingly, with a significant bump in the display, the battery life has seen some drastic changes.

When the display was set to its full WHD resolution and 90Hz refresh rate, the phone barely lasted a whole day of heavy use. Turning the resolution down to FHD+ and the frame rate being locked to 60Hz, the battery life improved, but not by a whole lot.

On the more objective side, the OnePlus 7 Pro lasted 9 hours and 24 minutes on the Geekbench battery test.

While the battery life isn't bad by any means, we've just come to expect better from OnePlus.

OnePlus 7 Pro Verdict

The OnePlus 7 Pro is in almost every way a premium flagship smartphone. You also finally get a WHD display with HDR10+ certification. The OnePlus 7 Pro leaves very little reason to be unhappy but does reveal a few areas where there is scope for improvement, like the camera app, which could be more wholesome. However, the OnePlus 7 Pro loses out on points because of the lack of an IP rating, and the phone's bulkiness. The battery life was also on the lower side. All in all, for the price, the OnePlus 7 Pro remains a rather strong contender in the premium flagship segment and you wouldn't regret buying this phone.
