

New Charlie's Angels

Here's the first look at the new Charlie's Angels movie that's set to release this September. <https://digit.in/july19-100>

Volcano from Space

Astronauts snapped an incredible photo of the volcano Raikoke erupting in the Pacific Ocean. <https://digit.in/july19-101>

Oppo Reno 10x ZoomGood cameras backed by a classy design

The Oppo Reno 10X Zoom looks classy, has the necessary firepower inside to claim flagship status and offers a periscope camera with 10X hybrid zoom. With formidable features like a Snapdragon 855 SoC, periscope camera and a premium design, can the Oppo Reno 10X Zoom prove its worth?

Build and Design

It is one of the classiest looking phones to come out this year. You get a frosted-glass design, a seamless body and a triple-camera setup.

The front has an all glass, almost bezel-less display. The volume rockers and the power button are easy to reach, but they feel a little stiff. It has a USB-C port but no 3.5mm audio jack.

The Reno 10X Zoom has a pop-up camera design which is housed in a shark-fin shaped structure. The module takes less than a second to come up, but becomes quite noisy over time. While the Reno 10X Zoom does look classy and premium, it's quite bulky weighing 210 grams.

Display

The device has a wide and expansive 6.6-inches AMOLED, FHD+ display. It's protected by Gorilla Glass 6 and there's practically no bezels. Despite the DCI-P3 colour profile available, the display is still not HDR certified.

The display clocked an impressive 765 lux in our brightness test, but the panel seemed to have a cooler bias. The phone's minimum brightness, how-

ever was quite high, as compared to other AMOLED displays. The Reno's display also integrates a fast in-display fingerprint sensor.

Performance and Software

The Oppo Reno 10X Zoom is no slouch. It's powered by the Snapdragon 855 processor and comes with up to 8GB RAM and 256GB storage. On AnTuTu, it scored 356686. On Geekbench Single and Multi-core tests, the Reno scored 3256 and 11108 respectively.

We received the 8GB RAM variant and mostly, at least 60 percent of the memory was always under consumption. The ColorOS

6 that powers the Oppo Reno's user experience is the best UI Oppo has created so far. It's based on Android 9 Pie and there's a remarkable improvement in UI aesthetics.

Camera

The camera uses new technology that relies on a periscope setup to achieve 10X hybrid zoom. The Reno also goes to 60X digitally, but it's hardly of any use since it reduces quality.

The Reno 10X Zoom's camera stack comprises of a 48MP Sony IMX586 sensor with f/1.7 aperture, an 8MP ultrawide camera with f/2.2 aperture and a periscope 13MP camera with f/3.0 aperture. The third lens has a prism that bends light entering the lens to achieve higher magnification with little loss in detail.

Nevertheless, photos in the day with the 48MP sony sensor, come out

really nice. The colours may look a little too saturated but the photos come out noise-free with high sharpness. The default output is in 12MP but you can flick the 48MP mode to take high-resolution photos.

The wide-angle camera is the weakest link. It may handle daylight photos fine, but noise is seen in low light.

Now, the prism telephoto lens has 13MP resolution but outputs in 12MP. As for the quality of the 10x zoom, it is able to reproduce a good amount of detail, but falls a little short in colours, contrast and dynamic range.

The Oppo Reno also houses a shark-fin camera with 16MP resolution that pops out at an angle.

Battery

The Oppo Reno 10X Zoom comes with a 4,065mAh battery that tops up with a 20W VOOC charger. The large battery ensures the phone lasts well over a day, topping it up to max capacity takes a little over an hour. On Geekbench's Battery Test, we clocked over 12 hours of screen-on time. The device has good battery life that can extend over a day with moderate usage.

Oppo Reno 10x Zoom Verdict

The Oppo Reno 10x Zoom feels classy and sturdy. The performance is pretty flawless with little to no lag. The display is impressive as well. A major downside we found was the UI and the plethora of bloatware that clutter the notification shade in no time. The Reno 10X Zoom's camera is the star of the show. The photos are comparable to a premium flagship, however, low-light photos need a little more polish. Buy the Reno 10X Zoom if you want a sturdy, well-designed phone with a good camera and performance.
