

Lupe Pure Cordless

Funding: US\$ 438,645 pledged of US\$ 95,354 goal

Link: <https://dgit.in/LupeCordless>

The Lupe Pure Cordless vacuum cleaner distinguishes itself from other cordless vacuum cleaners in a few areas. Firstly, the Lupe Pure Cordless is one of the few upright cordless vacuum cleaners, therefore you will not have to struggle to balance it against the wall, it will stand upright wherever you plant it. It's comparatively large form factor allows it to easily house a full 1-litre bin and a larger battery as well. The battery, according to Lupe, will allow for 60 minutes of suction power, which is higher than what you get in competing vacuums even when they are in low-power modes.

The device has a special pickup head, which is made up of two motorised agitators - the brush agitator which is used for grabbing dirt, and the cylindrical agitator which picks up dirt and creates an airtight seal for optimal suction. The motorised pickup head also effectively cleans both hard floors

and carpets, so you don't need to switch heads. The hose which leads to the special motorised head is detachable and allows 6.5 feet of extension for those hard-to-access spots. The Lupe Cordless can also hold two accessories - an upholstery tool and a crevice tool on its own body. The device is priced at \$599 and, \$366 for its Kickstarter backers.

Smart Halo 2

Funding: US\$ 753,323 pledged of US\$ 56,507 goal

Link: <https://dgit.in/SmartHalo2>

The Smart Halo 2, which is basically a navigation device for cyclists, keeps some of the best features of the original, launched in 2015 while adding a few nifty features. This cycling accessory is a circular, minimalist device that is mounted in the centre of the handlebars. It utilises a ring of multi-coloured LED lights to provide turn-by-turn navigation when connected to the smartphone app. The destination needs to be inputted into the app, and then the device is all reared to go. This rendition of the Smart Halo also houses a 1.5-inch OLED display which displays useful information like rider's speed in real time, fitness metrics like distance, time and the calories burned. It even displays notifications from a host of compatible apps like WhatsApp and Messenger. This screen means that the user gets more detailed navigation information like the distance to an upcoming turn or even the final destination.

Additionally, the device also provides information that adds functionality like interest points along your way like restaurants, medical stores, and more, and weather alerts as well. All you need to do to access this added information is swipe left or right on the screen. Other upgrades include notifications of how much CO2 emissions you have saved by cycling, a 25--lumen front light and a new motion alarm system. Smart Halo 2 is also 30 per cent lighter than its predecessor and it is available for about \$99 for early pledgers.

Travel Tripod by Peak Design

Funding: US\$ 6,306,721 pledged of US\$ 500,000 goal

Link: <https://dgit.in/TravelTripod>

Most tripods are used very sparingly owing to their bulkiness and heaviness. San Francisco-based Peak Design recognised this very problem and designed the Travel Tripod which has amassed a little more than \$6 million on Kickstarter. The Travel Tripods aims to eliminate a critical flaw in tripods - wasted space, which actually makes a tripod difficult to lug around. The Travel Tripod is one of the most compact professional tripods and has minimal wasted space, making it more efficient despite being a fraction of the size of traditional

travel tripods (It fits in the water bottle pocket in backpacks). The five-section legs can extend and lock into place with the help of five cam levers which can be open at the same time. On its head, there is a single adjustment ring that controls the articulation entirely. Peak Design has opted to use an aluminium ball along with three portrait mode cutouts, together with a quick-release switch. A lock dial is used to clamp the entire device down with a single flick.

Despite being small, the tripod can handle up to 9

kilograms of weight and extends up to 60-inches in length. It houses a counter-weight hook underneath as well. Additionally, the Travel Tripod also comes with a universal mobile phone mount which is tucked in the centre column. There's an

Inverted Mode which flips the tripod for macro and product shots, and a Low Mode which disperses the legs of the tripod on the ground flat to achieve a lower perspective. The tripod was created to support third-party plates and L-brackets and comes with a waterproof case and lifetime repair and servicing. The aluminium model is priced at \$349 while the carbon fibre version comes in at \$599.
