mere farmer at the beginning of the series but rises to great heights as a fearless warrior and the commander of the Vikings tribes. The show doesn't quite reach the complexities of GoT in terms of characters, storylines, set design and more, but it does provide quite an intriguing narrative, great character development and a pretty accurate depiction of medieval Scandinavia. GoT itself features some very interesting character development arcs as seen with Jamie Lannister, Daenerys

Targaryen and a few other characters. So, this show pretty much matches up to GoT in this aspect.

THE BORGIAS

To get the gist of this TV series, think of it as Game of Thrones Lite, except with so much more incest. (Look away, kids!) The Borgias is a nine-part mini-series which is packed to the brim with murder, blood, violence, and gore. It revolves around a family that rose to prominence in Italy during the Renaissance period. The show has a stellar cast and should ideally garner as much attention and praise as GoT did. While a few characters may be a bit too unpleasant for some, we're pretty sure you're used to unpleasantness if you've watched the, sometimes, revolting characters in GoT. *cough cough* Joffrey *cough*

AMERICAN GODS

If you're ever missing the gore and the super weird stuff that happens in GoT which include incest, people being put into pies, castration and more, firstly - you need help, secondly - watch American Gods. This American fantasy drama TV series is based on Neil Gaiman's novel with the same

name, and it features a great and weird storyline, involving all the old Gods and the new, that have moments which are weird, violent and engrossing. You will get all the gore that you got hooked on to with GoT and some super weird storylines that actually do make the wheels of your mind churn.

TABOO

You can't really go wrong with a Tom Hardy starrer, especially when it has a multi-layered storyline based on historical fiction. The TV show takes us back to 1814 London where the protagonist struggles to earn back his lost pride in a place where he has no friends. It is one of the best historical dramas to ever grace television, especially in recent times. The show is all geared up for an exciting second season that will be released sometime in 2019. We, for one, can't wait for the second season.

THE EXPANSE

This sci-fi drama surely doesn't possess GoT's splendour, however, its unique and perplexing storyline will

have you hooked right from the get go. The TV series is set in space entirely, revolving around our very own solar system for the most part. Even though it was cancelled by the network SyFy, it was, fortunately, picked up by Amazon

for the fourth season. We're hoping the deep pockets of Amazon amount to exceptional CGI in the upcoming season. And good storywriting too, pretty please?

BLACK MIRROR

This sci-fi anthology series will shake you to the very core with its cautionary take on technology and its possible effects on mankind. We're putting this very kindly, but the show has the ability to make you question the consequences of technology by putting across harsh realities in a fictional setting, which seems more *futuristic* than *fictional*, which is what makes it scary. It is a show that resoundingly puts forward the question, "Will this happen to us in the future?" While the fifth season

somewhat disappointed long-time fans of the show since it didn't match the mind-boggling storylines and concepts previous seasons delivered, the recent special interactive episode, Bander-snatch, was a masterpiece in most aspects. If you are missing the shock factor that GoT was well-known for, you can't go wrong with this series.

Most of these shows are or have been exceptional in their own way and surely offer some GoT-esque elements here and there. Game of Thrones has surely left a huge void in our lives, but these TV series should help fill that hole, at least temporarily until the GoT prequel (named Bloodmoon or the Long Night, or whatever really) arrives and hopefully, disrupts the TV series scene again, like its predecessor.
