

Counting sound particles

Physicists have developed a new 'quantum microphone' which can measure individual sound particles. <https://digit.in/aug19-93>

iPhone 11 demand to be same as XS

Reportedly, Apple has ordered for the same number of iPhone 11s to be manufactured as iPhone Xs's. <https://digit.in/aug19-94>

d Hi Rajiv,
Nice to hear from you again after a long time. Thank you for your suggestions about Fast Tracks, we will certainly look into them and see what's possible. :-)

About the eDVD, that was our first thought as well, to make a whole DVD in ISO format and upload it so that people could burn it to a disc themselves. Or, just download the ISO and extract it. But over time we decided against it. There were several reasons for this:

We wanted the software to be the latest update possible.

We wanted people to not waste bandwidth downloading 8/16 GB when they might only be interested in, say, 6 GB.

We wanted to make the DVD accessible on not just PCs and laptops, but phones as well, and start offering phone content too.

The main reason people are interested in our DVD is not for some special access

to software that they wouldn't otherwise be able to download (special offers are only a small part of the pie). The main draw towards the DVD is the content curation, which Team Digit does painstakingly. We try out software, test it, and then recommend it to our readers. The same goes for all the other content as well, even if it's free movies, or trailers, or even wallpapers. They're chosen specifically by geeks for all of you, and that's the real draw.

Plus, of course, when we do have special offers that are not for public distribution, we need to have a login system in place, or else companies will not give us those offers. For example, if a company usually sells software for Rs 100 and want to offer it to Digit readers for Rs 50, it has to be behind a paywall / login screen of some sort, or else their own customers might be upset if it's available for half price on a different URL. We will definitely be

working on making the interface better. It's a work in progress.

—Robert

I need your help regarding selecting a course for programming in Python for hacking. With so many courses available online, I am very confused. Can you suggest a free course?

—Parth Madan

Hey Parth, If you're an absolute beginner then start off with <https://www.learnpython.org/> which makes practically no assumptions about your existing programming knowledge. The learning curve is also very accommodating of beginners. Once you have worked out the entire set of exercises, you should then be more than proficient to move onto Edx or Coursera for the advanced stuff.

—Mithun

Letter of the Month

Hello Digit,

I am an avid reader of the magazine for 3 years now and have every issue of Digit since back then. On the off chance that you ask me how fanatical I am about Digit, I can tell you that I am so mad that I used to check on the current status of the courier AWB several times a day until it would reach me eventually. In fact, just to save me some time and sanity, I automated this job to get constant updates directly to my email by using the 'trackingmore' site. It didn't help, because I'd end up just checking it myself anyway, just in case the tracking more site wasn't working! You are my book porn!

I should tell you that I love the dmystify books, the editorials, and not to forget the cover stories. I don't get the same pleasure of reading anywhere on the internet that I get when I read Digit. I thought I should leave a suggestion, just as Mithun and Raaabo write editorials, why shouldn't Digit readers get a chance to write to you people and let the best tech article get published, because as we know, Digit is a community rather than a magazine. It would be a good way to get to know each other's ideas about tech.

I have read all the dmystifys and Fast Tracks, and am happy that almost everything about science and tech that is covered. PLEASE never stop the dmystifys, I love them so much

that I read them all the time, sometimes, even just before my exam days.

—Pranay Mokida, 2nd year NIIT Delhi

Thank you for your email, it means a lot to us to hear positive feedback about the work we do. We already welcome articles from our readers, and publish the best ones in our community section from time-to-time. We can see about starting columns from readers as well.

If you'd like to write for us, please suggest a topic and we'll let you know whether we'd want to carry that article, and then you can proceed. We're also happy to help you by editing the article and suggesting changes of your first draft, giving you writing tips, etc.

There are some rules to follow of course, and those are as follows:

- The article should be completely original work done by you, and sources for information need to be mentioned. We have a zero tolerance of copy pasting/plagiarism.
- The article should not be published anywhere else, either in print or online, and yes, this includes your own blog as well.
- You need to agree that once published, you are free to link to the article on our site (if it is online) and claim it as your original work done for Digit/SKOAR!, but you cannot publish the article elsewhere (print or online) without explicit permission from us.

If you feel you can follow these rules, I look forward to more contributions from you and other readers as well. :-)

—Robert
