Attackers could alter media files sent via WhatsApp and Telegram

Researchers have recently reported a flaw in the Android versions of WhatsApp and Telegram which allows attackers to alter media files sent via these apps. Symantec, a cyber-security firm warned that the vulnerability dubbed 'media file-jacking' can let attackers alter photographs, change invoices in financial scams, change out files in particular channel feeds, and probably even alter audio messages.

Research indicates that this vulnerability kicks in when the 'Save to Gallery' feature is activated to store media files in the external storage. Therefore, malicious apps that could have been installed by the user now have the ability to access the media files and modify them, as long as these apps are granted some write-to-external storage permissions.

MOBILE WATCH

Samsung A80

Samsung's attempt to disrupt the sub-₹40,000 mid-range segment is a smartphone with all the bells and whistles a mid-range device possesses like a Snapdragon 730G SoC, 8GB of RAM a 6.7-inch super AMOLED display, a 3700 mAh battery and more. But it also features an eyeball-grabbing feature – a slide and rotate camera setup! The entire camera module, consisting of three shooters including a 48MP primary lens, an 8MP ultra-wide lens and a 3D depth sensing camera, rotate as a block to double up as the selfie shooter. The action is similar to the Zenfone 6, but Samsung's rendition looks a tad more polished with its slide and rotate motion, instead of a simple flip. The Samsung A80 is a bit on the higher-end side of mid-range phones, sporting of a price tag of ₹47,990.

APP WATCH

Practo

Practo is an end-to-end healthcare management app which allows consumers to assimilate medical expertise from capable sources rather than the old 'Dr Google' method. Practo allows you to chat with certified physicians and get medical consultation within 60 seconds at the starting price of ₹99, book appointments with verified doctors at a physical clinic in less than 15 minutes, get lab tests done and also order medicines and get them delivered right to your doorstep. The app attempts to make healthcare more

accessible and convenient. As soon as you open the app, Practo prompts you by asking you what exactly you are looking for. First and foremost, you see the option 'Doctors' which lets you book an appointment with any kind of doctor

you require to see, such as doctors for women's health, skin and hair, child specialist, general physician and many more. The second option, and probably the most useful is the 'Chat' option, where users can chat with a certified physician. In our trials, we received a

response from a Family Doctor around 3 minutes after sending our question. The doctor assigned to you will ask you a few follow-up questions and then prescribe you some medicines, complete with a soft copy of the prescription. Practo even prompts you about ordering these medicines on the app which will be delivered to your address. The next option is 'Diagnostics' where you can book several kinds of tests such as blood test, urine test, blood sugar test and more. The fourth and final option is 'Pharmacy' which allows you to order medicines and have it delivered to your home. However, you need to order medicines worth at least ₹100 to avail this service and some medicines require you to add an image of your prescription as per government regulations.

Incredibox

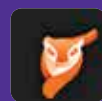

Incredibox allows you to create amazing music by simply dragging and dropping sound icons. You can make a team of 'incrediboxers' sing, beatbox, and play an instrument.

CalorieCap

CalorieCap is a diet app for those who eat out very often. The app allows you to find meals at restaurants around you that fit your diet plan. Additionally, the app is well designed and easy to use.

Enlight Pixaloop

Pixaloop allows you to animate your pictures by adding motion to them. It works very well with pictures that feature a background with clouds, or waterfalls, or even the sea.
