S

ony has had a lot of ups and downs with its TV

portfolio, but in the past two years, the company has started streamlining the models it launches, hopped onto the OLED bandwagon and upped its picture processing game with the X1 Ultimate chip. However, a lot of budget offerings have emerged in the market offering 4K HDR and some smart capabilities making it hard to recommend a premium TV. So does the Sony X95G have what it takes to grab attention? Let's find out.

Display and picture quality

The Sony X95G has a VA panel with support for 4K resolution and HDR 10 along with Dolby Vision support. It also has a Netflix Mode, first launched with Sony's Master Series line-up. The TV sports a good representation of blacks but the viewing angles aren't great. Sony has a technology called 'X-Wide Angle', which helps with the viewing angles of a VA panel. It is present on the X95G but not on the 55-inch variant that we have here for review.

Performance

Firing up our test sequences of Altered Carbon using the built-in Netflix app

and the very first frame had us immersed. The dynamic range and peak brightness make the content look desirable. In Dolby Vision Dark and Netflix mode, some content looked darker than we'd like and Dolby Vision Bright, as the name

suggests, makes things a little bright. We played a lot of FHD content from the TV like Wonder Woman, Young Sheldon, and more and the FHD content is presented beautifully as well.

Sony has implemented the Acoustic surface technology in this TV. While the sound from flagship OLED TVs with this tech sounds great, the X95G left us wanting more. Dialogues are clear, music is enjoyable, but the overall punch is missing. However, for everyday consumption, the speakers are pretty good.

We have Android 8 out of the box and the experience is butter smooth. There was not one moment when the UI didn't respond. There are some subtle changes to the UI, which work well. Overall, it is a clean UI giving content key visibility.

Build and design

The TV isn't the slimmest out there, but considering the amount of tech that goes into backlighting it along with no external power brick, it's okay. The place-

ments of the ports are pretty standard. They are all on the right side of the TV. On the back, we have a USB port, three HDMI ports, optical audio port, LAN port, along with the good old antenna. On the right-side panel, we have one HDMI port, two USB ports, headphone out and a video-in port.

The thickness of the TV makes it convenient to reach the ports on the side. The TV has slim bezels which do not interfere with the viewing experience.

If you decide to put the TV on a tabletop, then know that the feet are really wide, which means you will need a big table for this TV.

Sony X95G 55-inch 4K LED Smart TV Verdict

The Sony X95G is a fantastic premium LED LCD TV and a worthy consideration for those that don't want to get on the OLED bandwagon. It has a bright rich display for consuming content and gaming. The UI is fluid, features plentiful and audio is acceptable for TV viewing. Where it lacks is missing out on the 'X-Wide Angle' technology found on its larger siblings and limited HDMI 2.1 functionality. We haven't tested other TVs in this price range so it's hard to tell how it compares to the 2019 offering from LG, Samsung, etc. But if you are looking for the latest premium LED TV, you can definitely consider this one. There are 2018 flagships from other brands available at cheaper price points, but since this is a 2019 TV, we'd reserve our comparison of this TV with other 2019 TVs and not models from 2018.
