

LG OLED panels on iPhones

A rumour surfaced which indicated that the 2020 iPhone models will have LG flexible OLED panels. <https://dgit.in/aug19-63>

Dual pop-up selfie cameras

The Vivo V17 may reportedly have two pop-up selfie cameras and will launch in India by October. <https://dgit.in/aug19-64>

Xiaomi Redmi K20 Pro

Fashionable and fast

While most of us would associate Redmi with mid-range phones offered at a budget, the brand has come out with a flagship that does sound quite convincing. Price-wise, the K20 Pro's rivals fall behind in terms of performance, but not so much in the design and camera departments. The K20 Pro will please power users as the battery life, display, and performance are right up there with the best. Let's get into the details.

Design and Display

This is one of Xiaomi's best designed phones. The company calls the design Aura Prime, and the dual-tone play of colours look fascinating. The front is all screen, with very thin bezels. It achieves this by stowing the front camera in a pop-up module which pops up fairly fast. The in-display fingerprint sensor is also pretty accurate with an unlock rate of 4 out of 5.

The Redmi K20 Pro has a 6.39-inch AMOLED panel. It's also a bright panel with 724 lux registered in our test. On the lower side, the brightness falls down to 7 lux, which is pretty impressive. The display is also HDR rated. Presently, HDR videos play only on YouTube and not on Netflix and Amazon Prime.

Performance and battery

Xiaomi claims it to be the fastest smartphone in the market. It's a tall statement to make. Relying on benchmarks, we ascertained that the Redmi K20 Pro is significantly faster on some tests like AnTuTu and Geekbench but slower others like 3DMark and GFXBench. It seems the K20 Pro's CPU is much more well-optimised than the GPU. In real world usage, you won't find any significant difference compared to other Snapdragon 855-powered flagships. Dai-

ly tasks like clicking photos, browsing and launching apps are all blazing fast. The phone also manages resources very well. On the 8GB RAM variant, apps launched hours back resumed right where we left them.

When it comes to gaming, using the phone's in-game FPS counter we found

that PUBG Mobile on the K20 Pro ran at maxed out frame rate of 40 FPS while Asphalt 9 also maxed out at 30 FPS.

The 4000mAh battery on the K20 Pro managed to last 9 hours 46 minutes on Geekbench battery test, which is pretty impressive and should easily convert to over a day's usage. In the real world, 15 minutes of PUBG Mobile drained the battery by 5 percent while 30 minutes of Netflix drained the battery by 4 percent.

Camera

The Redmi K20 Pro boasts a triple rear camera setup and a 20MP pop-up selfie shooter. The K20 Pro packs a 48MP Sony IMX586 primary sensor, an 8MP telephoto lens with 2X optical zoom and a 13MP wide-angle camera.

In typical daylight conditions, the Redmi K20 Pro is actually pretty good. The details come out sharp and look quite aesthetic, despite being a little oversaturated. However, the camera tends to clip the highlights and overexpose the shot more often than not. The HDR mode, on the other hand, manages to salvage details from the shadows and expose the highlights better. It also has one of the better wide-angle cameras in this range. The K20 Pro also comes with a dedicated night mode that does the usual multi-frame processing, and the results are pretty impressive. But the night mode only works with the primary lens and you can't zoom in. There's also a small waiting period when the photo is shot and processed.

There's also 960 FPS slow-motion recording which is nowhere close to what the Galaxy S10 offers since it's done using software, and the camera stack lacks any sort of stabilisation.

Xiaomi Redmi K20 Pro Verdict

The Redmi K20 Pro has all the bells and whistles of an affordable flagship. We won't outright call it a premium flagship since there are still some features that are missing that makes a device premium. Yet, the K20 Pro incorporates all the features that are in vogue this year — a bezel-less display, pop-up camera on the front and triple cameras on the back, a gradient design and flagship performance. If you were wondering, the Redmi K20 Pro is also much more than what the Poco F1 offered. The Poco flagship focused only on performance while the K20 Pro is an all-rounder of sorts. While the price does come close to what other Snapdragon 855-powered flagships ship for, it's still the most affordable flagship you can buy right now that comes with all the bells and whistles that are in vogue this year.
