

New Windows Start Menu

Microsoft accidentally released an internal-only version of Windows 10, which showed a new Start menu. <https://dgit.in/aug19-65>

Sound Amplifier by Google

Sound Amplifier is an accessibility tool by Google which serves as a phone-based hearing aid. <https://dgit.in/aug19-66>

Lenovo Yoga C930

High on style, performance, and price

Price
₹1,39,990

FEATURE	90
PERFORMANCE	80
DESIGN	69
VALUE FOR MONEY	79

The Lenovo Yoga C930 has been around in the market for quite some time now. But that doesn't mean it's irrelevant. We've had a test unit with us for nearly two quarters of a year now. Now we think it deserves a proper review.

Display, audio and IO

The display is the Yoga C930's most distinguishing feature. It sports a 13.9-inch IPS LCD touchscreen panel with Dolby Vision. The native resolution is 4K UHD (3840 x 2160 pixels). Colours on the display appear neither washed out nor oversaturated while browsing and watching videos.

Sound from the Yoga C930's "rotating sound bar" is underwhelming. Volume is sufficient for watching a few videos during lunch in a quiet office cubicle. The inbuilt Dolby Atmos app features sound profiles for music, movies, games, etc. but there's little difference felt when these settings are changed.

The Yoga C930 doesn't offer too many ports given its slim form factor. On the left, we see a USB-A 3.1 port, a 3.5mm audio jack for headsets, and two USB-C 3.1 ports that support Thunderbolt 3 and PD. On the right, we see a power button with a status light on it. An extra USB-A port and an SD card slot would have been better. However, it gets a finger-

print sensor and a physical privacy lock for the webcam, a rare ThinkPad privilege.

Performance

The Lenovo Yoga C930 is powered by an Intel Core i5-8250 CPU and 16GB of RAM. This is not the most recent 8th Gen "Whiskey Lake R" refresh but the older "Kaby Lake R" refresh. Storage is taken care of by an SK Hynix 512GB PCIe NVMe SSD. Rendering graphics is done by an internal Intel UHD 620 graphics card. In terms of sheer numbers, the Yoga C930's spec sheet doesn't look too strong.

Our Yoga C930 review unit bagged average scores in our CPU and GPU benchmark tests. On PCMark 8's Accelerated Creative test, the review unit scored 3373, which is nothing to write home about. In 3DMark's Cloud Gate and Sky Diver, the review unit bagged 7428 and 4024.

In everyday use tests, the review unit met our expectations but didn't exceed them. It often hiccupped on screen animations. So, performance on the Yoga C930 is good but not exceptional.

Build and design

The Yoga C930 sports glass for the top cover. It is easy to grip and carry around.

At 1.4 kilogrammes, it's not the lightest laptop around in the market. There's a glossy 13.9-inch touchscreen display that's surrounded by glossy black bezels of moderate thickness. The keyboard area is metallic and has a clean matte gunmetal grey finish. In summary, the Yoga C930 is well built and has oodles of class and style.

Keyboard and touchpad

The keyboard on the Yoga C930 is similar to that on other Lenovo models. The keys have the right amount of travel and resistance for long documents and emails. The two-stage backlighting is neither too bright nor too dim. The keyboard could have incorporated dedicated Home, End, Page Up, and Page Down keys for easier text manipulation.

The touchpad on the Yoga C930 is a precision unit. This means three- and four-finger taps and gestures can be modified from Windows Settings directly without the need for any other third-party utility. The left- and right-mouse buttons inside the touchpad are easy to click.

Lenovo Yoga C930 Verdict

It's quite clear from its exterior design that the Lenovo Yoga C930 is quite unique. Lenovo's focus is primarily on solid build, premium looks, portability, and good performance. The Lenovo Yoga C930 has all of those things but it brings them all at a steep price of about Rs 1,54,000. If it's the performance of the Yoga you're after, you can get it from say, the HP Pavilion x360 at nearly one-third of the Yoga C930's cost. However, if you simply can't do without the Yoga C930's cool glass design, then hit the "Add to Cart" button on it without a second thought. You'll have the coolest looking convertible laptop in a ten-kilometre radius for sure.

—Vignesh Giridharan
