is set to pick an integer between values 0-to-8 which will be used to select the quote from the array.

We're going to be working on improving the code later on and make it so that just typing the word bobby, at any point in the sentence, will invoke the bot. This can be done using the includes or search method or even by using RegEx. We'll leave that to you. Let's install the dependencies.

INSTALLING DEPENDENCIES

First, open a command prompt and navigate to the folder where you have placed the three files associated with the bot. Let's say that's in E:/Temp/Bot. Install Winston, which is a logger for your bot. We've already invoked it in the bot.js file in the second line itself. You can download and install Winston by typing:

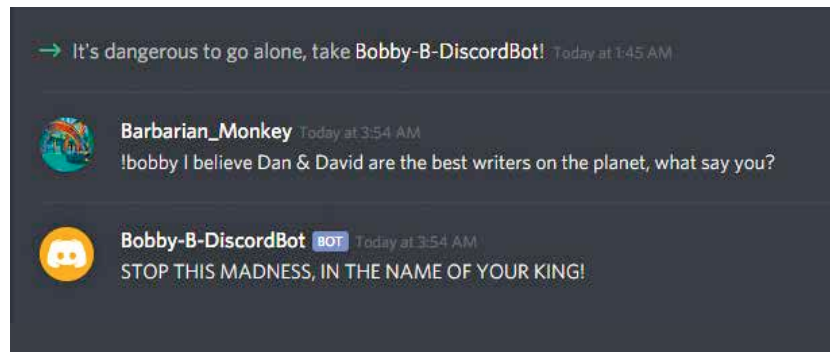

```
npm install discord.io winston
-save
```

finally proceed to running your bot. You have previously added the bot to your server but it hasn't been made active yet. If you open up your Discord server and check the memberlist, then you will notice that the bot will appear to be offline. In order to fire it up, you will need to type in the following in your command prompt:

Node bot.js

Any and all errors that might be present in your code should pop up right now. If nothing does, then your code is running smoothly and you should see the following message:

```
{"message": "Connected", "level": "info"}
{"message": "Logged in as: ", "level": "info"}
{"message": "Bobby-B-DiscordBot - (0000bunchOfNumbers0000)", "level": "info"}
```

Bobby B is in the house!

The other set of files you'll need can be obtained by using the following command:

```
npm install https://github.com/woor/discord.io/tarball/gateway_v6
```

Gateway is simply a Discord app library for node.js that allows your bot to access files from your local machine to talk to the discord API.

FIRE UP THE BOT

Once all the dependencies have been downloaded and installed, you can

If you've used the code above without making any edits, you can now head over to your server and try evoking the bot by typing !bobby in the chat and it should respond with one of the quotes you've stored.

There you have it, you have built your very first Discord bot. This one is fairly simple but the possibilities are actually endless. You can also head over to the official Discord developer portal to check out the documentation for more details. If you're going to be making a Discord bot of your own, do keep us posted by writing to us on editor@digit.in. 

*CODING MATTERS

*Java 13 features

Official list of dev targets for Java 13 cite improvements to text blocks, application class-data sharing and garbage collection.
