

ROIDMI NEX Storm

Funding: US\$ 177,429 pledged of US\$ 30,000 goal

Link: <https://dgit.in/NEXStorm>

The ROIDMI NEX Storm is a smart cordless vacuum which also comes with a mop! It aims to address and solve the issue of having to buy and store too many cleaning equipments by combining a vacuum and mop into one. The device has a water-resistant roller brush along with a magnetic mopping component known as the Mop Box. This box can store up to 180ml water and can be attached to the brush head easily. The Mop Box uses a technology called ISD or Intelligent Slow Drip which allows controlling of the drip speed so that the mopping pad is wet but doesn't hold too much moisture which is counterproductive in the cleaning process. The pad is made up of microfibre and can host dust, dirt and liquid. However, it does need to be replaced from time-to-time. You can easily replace it by peeling off the mopping pad and reattaching a new one to the brush head. The idea of the device is vacuum up the dirt and dust first and then efficiently finish cleaning with the mop.

It also comes with a magnetic wireless charger, which essentially becomes a dock for the cordless vacuum cleaner. Simply drop your ROIDMI NEX Storm into the wall-mounted charging dock and that's it. It can be forgotten about until you need to use it again. It consists of eight 2500 mAH Samsung battery cells. The device can be operated on battery for about 60 minutes. You can also connect the device to your smartphone via Bluetooth to check battery life, usage, cleaning times, gear endurance, filter capacity and empty vacuum alerts. The device is also quite lightweight, weighing about 1.5kg. The NEX Storm also has 2 years warranty and battery replacement service.

Wearbuds

Funding: US\$ 528,862 pledged of US\$ 50,000 goal

Link: <https://dgit.in/Wearbuds>

Wearbuds essentially takes two standalone products - a pair of truly wireless IEMs and a fitness tracker - and combines them into one to make a device that snips off the invisible wires, which is the bulky cases here, that holds other IEM users back. The earphones house a Qualcomm smart audio chip and are water resistant as well. Often, truly wireless IEMs do not have the capability to last more than a couple of hours with their integrated battery and carrying around the

charging case while you are jogging or in the gym can be exasperating. Wearbuds eliminates this hurdle by creating a fitness band which goes around your wrist with special compartments to charge and house the provided IEMs. Wearbuds comes with Bluetooth 5.0, fitness monitoring abilities which sync to their mobile app aiPower. When the earphones are removed from the wristband, it becomes very lightweight and the buds themselves are lightweight. Pressing down on both sides of the fitness tracker causes the earbuds to be ejected by the spring-load mechanism that holds them in. They have the ability to sync with your device's voice assistant as well.

Monster X

Funding: US\$ 55,924 pledged of US\$ 5,000 goal

Link: <https://dgit.in/MonsterX>

Monster X is an extremely powerful and portable power hub which has a host of features. It has a 100W AC outlet or socket which allows you to charge heavy-duty devices that require an outlet to charge properly. Along with this, it also features 10W Qi wireless fast charging, two USB-C ports (one IN and one OUT), two USB-A ports, and a micro-USB port as well. The company claims you can simultaneously charge up to 5 devices on this powerful charger. The Monster X also has Fast Recharge which means you can fully charge this powerhouse of a device in only 1.5 hours. To add to all of this, it also features

Pass-Through Charging. This basically means that your Monster X can be charging at the same time as all your other devices are, that are connected to the Monster X. All you need to do is plug in your Monster X while keeping the other devices plugged into the device itself and they will all charge together.

Monster X also has Intelligent Temperature Control which, according to the company, can actively detect, observe and reduce the charging temperature when intensive tasks are being performed. The built-in fan which provides rapid cooling is compact in order to keep the product itself as compact as possible. The power station has 20100mAH capacity and can even be charged using solar power! That's right, the device can be charged up from any solar panel. However, it does take way longer to charge fully - about 5-6 hours.
