Battery pull tabs

Two adhesive strips fix the battery in place inside the device. Worry not, pull tabs for the battery are present which let you pull it out without much fuss. This allows for easy repairs. The battery present on the Pixel 3a also beats out the Pixel 3's 11.2 Wh battery with its own 11.55 Wh battery.

Easily-separated display panel

The device's display is secured with a spongy, easily-separated adhesive which spells good news for repairs but bad news for its water resistance. Additionally, the display is attached to the motherboard with a single ribbon cable much like its ancestor, the original Pixel and Pixel XL. The device also has a Synaptics S3706 touchscreen controller.

The renowned Pixel shooters

The Pixel 3a houses the same, well-known 12.2 MP rear camera as the Pixel 3. However, instead of incorporating two 8 MP front cameras, the 3a only keeps one, which averages out the apertures from the two selfie cameras in the Pixel 3 by having an aperture of f/2.0.
