ROAD TO A CASHLESS SOCIETY

UPI (Unified Payments Interface) has played a crucial role in the journey towards a cashless society in India

A cashless economy is the desired state to be in for many countries around the world. While there are opposing schools of thought, both endorsing and retaliating against the construct of a cashless society in somewhat equal measure, one cannot deny the revolutionary capabilities UPI has granted the citizens of India. Moving money from one bank to another, something people need to do on a regular basis, has never been easier. Multiple reports, including ones from the National Payments Corporation of India, suggest that Indians are embracing digital transactions like never before. While a major amount of credit for this development can be bestowed upon demonetisation, invoked by Prime Minister Narendra Modi way back in November 2016, UPI has certainly made the transition to digital payments amongst the masses much easier.

HOW IT CAME INTO EXISTENCE

In March 2011, an RBI document revealed that the number of non-cash

transactions per individual stood at a mere six per annum. According to the document, only a minuscule fraction of the (then) approximately 10 million retailers in India accepted card payments. Nearly 145 million households were also completely excluded from banking, let alone online banking. The vast disparity in the numbers of people who used digital payments versus those

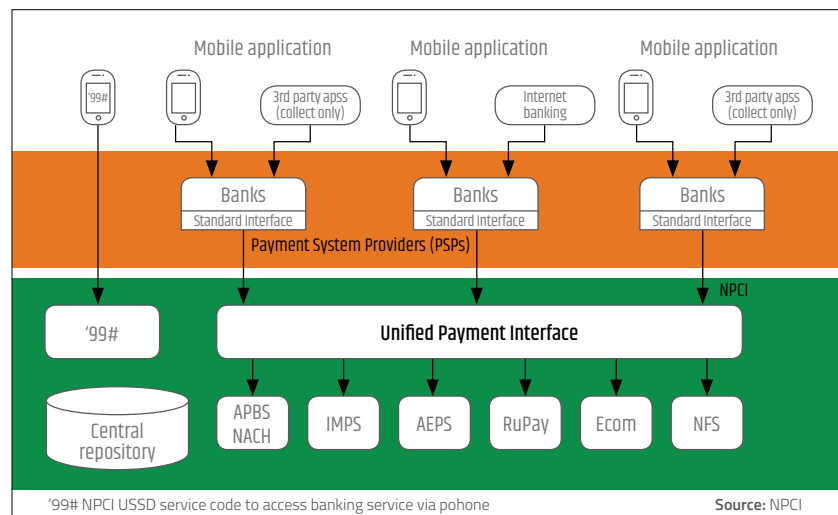

various systems with different service levels, into a country-wide, uniform process for all retail payment systems. In light of the document revealed by the RBI and other contributing factors, the NCPI was tasked with implementing UPI to simplify digital transactions and provide a single interface which could be utilised across all systems. The system, regulated by the RBI, has transcended to become one of the most popular, if not the most popular, methods of transacting money digitally in India. Mr Sharad Sanghi, MD and CEO of Netmagic, an IT service and technology in India, called UPI one of the first and most successful deep tech innovations in India.

who didn't was worrisome, especially because of financial nuisances such as black money and corruption. The government set up the National Payments Corporation of India (NPCI) in April 2009 with the core objective of consolidating as well as integrating
