

RECIPE BOOK

The RecipeBook app is for those of us who need some inspiration to get cooking. The app itself is a large collection of recipes that you're free to try out. Opening the app, it feels like you're in the play store again, only for recipes. Of course, the app is free in this case.

When you've finally found something that you think you can cook among the thousands of the recipes RecipeBook has to offer, the app gives you the total time it'll take you to finish the dish, which is a combination of preparation time and time to cook, and it'll show you all the ingredients you'll be needing for that particular recipe. The app will also show you nutritional value of that particular dish, and allow you to create a shopping list for the ingredients you'll need from right there. You can actually check off ingredients as you acquire them. They've tried to ensure that you really don't need to open another app at all.

RecipeBook has two interesting features that are worth mention-

RecipeBook

ing, Shake n Make and Snap n Cook. When using Shake n Make, you select ingredients that you have lying around in your kitchen and you shake your device, and RecipeBook will give a list of recipes you can make using those ingredients. Similarly, Snap n Cook works in a similar way, only now you take a snap of the ingredients. This mode can be a little buggy at times, but it's still a cool feature.

MAYA

Maya, which initially went by the name LoveCycles, is a free, and apparently, fun and easy to use menstrual

cycle calendar. Maya helps track a lot of factors related to menstruation, such as related symptoms, mood swings, and of late, they've started keeping track of the overall health of women as well. The primary use cases for Maya are improving the accuracy of both contraception and conception.

All the data that you input which is being tracked by Maya, is fed into its prediction algorithm, which in turn allows Maya to provide timely assistance in the form of notifications and even tips, in addition to keeping track of the current cycle, obviously.

Maya is able to work while offline as well, so you don't have to worry about having poor network connection or no Wi-Fi, you can still use the app. Maya will automatically back the data up to your account when it gets the chance. The app will also sync your data across all the devices you have logged in through. There's colour codes for menstrual phases, for better guidance and prediction.

In addition to all that, Maya can also track a bunch of different health-related symptoms and offer users help accordingly.

NUMERICS

Numerics is a dashboard app designed for business users. The goal is to be the one app where you can showcase, mix, and match data from a variety of sources. Numerics works with a lot of such sources, from Basecamp, to Facebook, Google Analytics, Salesforce, stock info (from Yahoo), Zendesk and more. They're always looking to add more such data sources.

The app has dozens of predesigned widgets for you to use, based on 20

plus sources of business data. You can show data in plain old numbers if you so please, or turn them into good-looking charts and graphs. You can even control the colours and other

Numerics

attributes of the charts. Numerics allows you to design multiple dashboards at the same time, and swipe or switch between them as and whenever needed, so you can work on multiple projects at the same time. Overall, it's a great app if you need to create a custom dashboard. It is available only on iOS devices though.

RHYMLY

There are a plethora of apps which help you rhyme with and discover words in English. However, not so much when it comes to Hindi. Rhymly intends to fill that void. If you are a Hindi writer, or happen to know one who is, then you should probably pick up or suggest the Rhymly app. The platform provides you with rhymes and meanings for Hindi words, while also acting as a way for others to showcase their works to the world, or at least, to the app's user base.

How the app works is very simple, just type in the word that you want to rhyme with and Rhymly will find a rhyming word for you. It doesn't even have to be Hindi only, 'Hinglish' couplets are also pretty popular on the app. The app is even planning to add more languages, which is fantastic. If you're into content writing in Hindi, you definitely do not want to miss out on the Rhymly app.
