

DROOLMAAL

Fifine K669B

The Fifine K669B is a very good-looking budget mic. It comes with an all-aluminium body, including the mesh and even the volume control knob on the front. While we're still on the mic's build, it's also got a strong and sturdy stand.

You can try messing around with the mic volume but the volume knob on the front is kind of useless. Sure, you can use it as an external mute button maybe, but you'll most likely have it at around 80-90% most of the time anyway. Having it anywhere else doesn't make much of a difference.

The K669B features a cardioid pattern or structure, meaning it picks

up sounds best from one direction. No, not the group, literally from one direction. Sounds from other directions will be much weaker and muffled. This works well if you want to cut down on background clutter and noise.

The K669B is compatible with Windows, Linux, MacOS, and Android too. It also very good at its job as a mic, audio is clean, especially for a mic

at this price range. It's a pretty good budget mic and it would be ideal for a budget streamer setup. However, it doesn't have an XLR connector, so if you're looking for a mic to record music and such, you're better off looking for a higher-end mic. The K669B is also definitely not portable enough for vloggers to use.

The K669B's USB cable is, unfortunately, always attached. This contributes to the lack of mobility we spoke about earlier. Also, because it can't be detached, you can't sub or use a longer cable as and when needed.

If you really want to make it work well, get yourself an arm, a pop filter, and you've got yourself a decent budget streaming mic setup that won't pick up a lot of background noise.

SPECIFICATIONS:

TYPE: Condenser | **POLAR PATTERN:** Cardioid | **FREQUENCY RESPONSE:** 20-20kHz | **SENSITIVITY:** -34dB±30% (at 1kHz) | **S/N RATIO:** 78dB | **POWER SUPPLY:** 5V USB power | **OUTPUT CONNECTION:** USB 2.0 | **PRICE:** ₹3,990

PTron Quinto

The PTron Quinto Bluetooth speaker is a budget bluetooth speaker offering from PTron which is also easy on the eyes. At least from a distance. The first thing you'll notice about the PTron Quinto is that it looks like it's made out of wood, which definitely gives it a premium look. They've advertised that it's made out of wood everywhere, but on touch you'll realise that it's not wood. It's plastic, or a vinyl wrap.

Out of the box the Quinto comes with its own microUSB to USB charging cable and an aux cable, which is nice. We wish it was a Type-C charger though. Still, we won't have to go hunting for one if we decide to use it with a laptop or a desktop. Brownie points for that. The speaker controls are located on the top of the speaker instead of the back, which makes it much more

accessible. Here you'll find the 3.5mm jack for the aux cable, a USB port, a microSD slot, a microUSB port for charging, a mic, the mode switch button, the next track, previous track/volume control buttons, the pause/play/make/receive calls button and the on and off switch. The mode switch button lets you switch between aux, USB, sd card, bluetooth and FM modes. Long pressing the track/volume buttons will increase or decrease the volume, while quick taps will allow you to skip or go back to previous tracks. The PTron Quinto sports a small form factor and is portable.

Additionally, it comes with 4 hours of battery life on a full charge.

In terms of audio quality, it's as good as you can expect at its price range. However, offerings from JBL and Bose at the same price, or even cheaper prices offer a much better audio experience. We'd go for those unless you want the Quinto exclusively for its retro looks and fake wooden finish.

PRICE: ₹2,000
