

#INDIAPROJECT

Let's get together
and help small
Indian entrepreneurs
succeed...

Team Digit | feedback@digit.in

F

or almost two decades now, all of us at Digit have been driven by one single goal – to be India's technology

navigator. We just want to do our bit towards making our nation the technology superpower we know it can (and should) be.

As a media company, our strength lies in spreading information to you, our readers. Every other media company does the same, and all of us survive off money earned from advertising. Companies want to reach you and inform you about their products, and they use media platforms to do so.

This system is slightly biased however, because it ensures that big companies can afford to pay more to be in your face for a lot longer than small companies. As a result, starting off from scratch as an entrepreneur (not just in India), is like trying to run a race with not just your hands tied behind your back, but with your legs chained, and a backpack full of bricks strapped to you!

Now, don't get us wrong, the biggest companies are that big because they make awesome products, and there's nothing wrong with them being big. However, we still see our role as being a media company that does its best to give you all the information it can. But how can we do that if we ourselves do not know about most of the Indian tech entrepreneurs out there? Sure, we have a pretty good handle on the stuff happening in large metro cities and richer states such as Delhi, Karnataka or Maharashtra, but honestly, if you're a tech entrepreneur in a smaller state, chances

are we're never going to hear of you. This has to change.

#INDIAPROJECT

We want to hear from every Indian Tech Entrepreneur out there, who has put his or her life into building a small tech company. More importantly, we want you, our readers, to hear from all of these budding Narayana Murthys. We're going to dedicate a month or two

and spread awareness of the work our brothers and sisters in J&K are doing, and if you know someone from the region who is a technology entrepreneur, share this article with them, and get them to contact us to share their work and their passion for technology.

We don't want to jump too far ahead, as it's a pilot project that's just taking off, but next on our list is Sikkim...

each to states and union territories in India, and invite technology entrepreneurs based in that particular state to give us details about their business. We then help them create a dedicated page about their business on our website, and also create advertisements, social media posts, and even print advertisements for a select few who we will choose via lucky draw. We will foot the bill for all associated manpower and material costs for doing all of the above.

What we need from you, our readers, is to share this article, the pages of companies you find interesting, the advertisements, and the social media posts (they will be tagged “#IndiaProject” to distinguish them from everything else), so that we can collectively help spread the word about uniquely Indian companies.

BEGIN!

We've chosen Jammu and Kashmir as the pilot project. So let's all get together

COPYLEFT

It is in India's best interest that this idea is not limited in any shape or form. Instead of trying to copyright it, we're releasing this idea as copyleft (public domain) instead. We actively encourage all other media houses or influencers with a whole lot of subscribers (on Instagram, YouTube, Twitch, TikTok, etc), to do the same thing in their own vertical. Media houses could do this for entrepreneurs in whatever field they write about, including technology.

If you want to use the same hashtag as us – “#IndiaProject” – we welcome you to do so. If not, and you want to come up with your own catchphrase, we welcome that too! Our only aim is to help small scale Indian entrepreneurs get some free advertising, and as long as you're doing that, we love you!

If you're a reader and are sharing this with your friends, thank you so much for helping your fellow Indians.

Jai Hind!
