Sennheiser Momentum True Wireless

Everything a premium pair of TW earphones should be

The Sennheiser Momentum True Wireless is the newest offering in the Momentum range from the company, which, up until now, have proven to be solid audio devices in their own categories. Let's look at how these true wireless earbuds fared in our review.

Design and Build

The Sennheiser Momentum True Wireless casts away the neck cable on the Momentum Free earbuds and packs in a spanking-new 7mm driver. The earbuds adorn silver detailing interrupted by a pattern of magnetic gold points that fix them to the charging case with a satisfying click. The earbuds are lightweight and extremely easy to secure in your ears. They also offer a comfortable and snug fit.

The charging case, made out of a greyish-tone coarse cloth with a classy heathered weave, is extremely attractive. The cover houses magnets which causes the case to audibly snap shut when closed. There's USB-C charging and a battery level indicator on the charging case too. The case, although gorgeous, is slightly bulky and we'd prefer it if Sennheiser had worked on trimming down its form factor.

Features

The touch controls, while convenient, really aren't all that intuitive with several actions needing double taps or triple taps even, making it difficult to get accustomed to. Tapping the left earbud once pauses the music and tapping it again resumes it. Additionally, the earbuds also pause music or media when you take one or both the buds out of your ear canal. Pressing the left bud twice plays the next track while pressing it thrice plays the previous one. The right earbud, on the other hand, can be used to accept calls and to awaken your

voice assistant. Holding down the touch panel of the right or left earbud will increase or decrease the volume respectively. We were displeased with the inability to control the volume precisely since holding down either bud increases or decreases the volume rather rapidly and achieving your ideal volume setting can be a bit of a precarious situation.

There's also a Transparent Hearing feature which allows you to hear the ongoing in your environment while you are listening to music.

Performance

Barring a few minor, mostly inconspicuous flaws, the Sennheiser Momentum True Wireless earbuds are easily one of the best true wireless earbuds you can buy. The audio is clear and crisp. The earphones get an extra boost from the new 7mm driver which results in a more controlled and capable audio performance. The bass thump is heard clearly in tracks such as *Call on Me* by Chris Rea and *Another One Bites the Dust* by Queen, however, it is not overwhelming. If you prefer the head-banging bass like on Beats headphones, these earbuds aren't the right fit for you. Despite a prominent bass presence, audio and instrument clarity isn't compromised in any manner. Mid and high frequencies

are balanced impeccably and the sound output is quite natural. They tend to suit just about any genre, which is an ideal scenario, especially at this price point.

Transparent Hearing actually does enhance the sounds around you ever-so-slightly, but this doesn't really matter since you can already hear a lot of what is going on around you because of inefficient isolation. This could possibly be because of the lack of foam tips.

Call quality is quite decent as well. The earphones are an absolute dream to consume content on. They feature aptX low latency, so media plays perfectly in sync. We tested this out across Netflix and YouTube, as well as downloaded videos, and the results are spectacular.

Battery life is nothing extraordinary, unfortunately. The earbuds lasted about 3 and a half hours from full charge which is pretty close to the company claim, which is 4 hours. The charging case houses two extra full charges for the earbuds, giving you a total of around 12 hours of battery life.

Verdict

Sennheiser gave itself quite a task by pricing the Momentum True Wireless earbuds at ₹24,990. However, they haven't failed at this. The earbuds feature a stylish design, smart controls, professional sound and are a fantastic choice for those who want to live the 'untethered' life. Apart from a few issues here and there, as mentioned above, Sennheiser has managed to show off their audio prowess with the Sennheiser Momentum True Wireless.
