

The Surprising Comeback of Vinyl Records

Vinyl LP unit sales in the United States from 2006 to 2018

Vinyl makes a comeback from near-extinction

place soon after, but these were also rendered obsolete with the invention of desktop computers. However, these machines are clicking and clacking their way back into the homes and workspaces of people around the world. The comeback of typewriters, however, doesn't seem to be strictly about nostalgia since

A USB Typewriter which connects to your tablet

many young typewriter enthusiasts have never really experienced the ping of the return lever in typewriters, and perhaps just find the experience to be a fun and fulfilling one. Apart from actual antique typewriters, a more modern take is also available, such as Rocksete, which features built-in JBL speakers, Bluetooth connectivity and a premium build and quality which uncannily captures both the charm of retro typewriters and the functionality of modern tech. USB typewriters are also all the rage now since you can connect your tablet or,

in some cases, your smartphone to the device and type away on them!

Kodak Ektachrome

In 2018, Kodak relaunched its Ektachrome slide film, with the 35mm version of the film being brought back first. Analog lovers rejoiced as Kodak followed up with releasing the Super 8 (8mm) and 16mm formats later in the year. This colour reversal film, which was primarily utilised in projectors and print work, had been taken off the shelf for over 6 years due to lack of demand and multiple manufacturing issues. However, there was a revitalised interest in analog film in 2017, which contributed to Kodak's decision of bringing it back. Kodak accomplished the revival despite the process of manufacturing the film requiring over 80 ingredients that are not easily obtainable anymore.

ViewMaster VR

In 2015, Mattel decided to awaken the ViewMaster from its decades-long slumber. For you young folks out there

New ViewMaster VR 2015

who don't recognise the old ViewMaster, it was an iconic toy from the pre digital era which allowed users to see sort-of 3D images by inserting a disc into the ViewMaster. The all-new ViewMaster is essentially a VR headset featuring a smartphone slot, an app, ViewMaster discs like the original and a lightweight plastic viewer. Mattel collaborated with Google to revamp this classic stereoscopic toy into a VR device by using Google's Cardboard VR technology. Instead of inserting the discs into the device like its predecessor, users will now have to load up a smartphone into the new ViewMaster and then place down the disc they want to view in front of them to load up multiple VR experiences.

Tamagotchi

The Tamagotchi is a popular retro egg-shaped toy that first launched in Japan 23 years ago. The toy was briefly made available to purchase on the event of its 20th anniversary. Following the widely

90s kids are ecstatic about the return of Tamagotchi

positive reaction, the Tamagotchi was officially re-released in 2018. The Tamagotchi allowed users to hatch and take care of their own digital pets when it first launched. The new Tamagotchi boasts of features

such as smartphone connectivity, the ability for your pets to marry someone else's and reproduce and more. Compared to the original Tamagotchi that could hang off a keychain, the revamped version is much bigger and demands a larger chunk of your pocket space. The reworked Tamagotchi still keeps its retro design by having just three simple buttons that can be utilised to interact with your pet. However, the monochromatic display has been replaced with a full-colour display now.

Cassettes and Tape Recorders

Even though vinyl sales have reached record-breaking heights in the recent years, it is still not music's fastest growing physical medium. According to a report by BuzzAngle, Vinyl sales grew by
