Spider Excalibur Carbon 3

When it comes to watch-making, Roger Dubuis is known for using special materials. His latest creation, the Excalibur, is no different, being made entirely out of carbon. The Spider Excalibur Carbon 3, is the first fully-carbon watch to be created by Roger Dubuis.

Since the whole thing, and we mean everything, the case, its calibre, even

the strap, are made out of carbon, the watch is incredibly light, weighing in at 81 grams. We know, that actually sounds heavy, but you've seen the watch now, it's not a small watch. The watch is 45mm wide and 14.05 mm thick. Another advantage of

cies and detailing onto the watch. The plate, tourbillon, and bridges, pretty much everything on the watch, are made out of carbon and sit in a layered structure which gives the watch some depth. Only 28 units of the Spider Excalibur Carbon 3 will be made.

being made fully out of carbon is that it's super-tough, and highly shock-resistant.

Another added advantage, for the design department this time, is that it was much easier, thanks to carbon's tensile strength, to carve out the intricacies

Bugatti Centodieci

When it comes to hypercars, Bugatti is a household name. Can we really use the term 'household' for hypercar makers? Probably not. Anyway, last year, we saw Bugatti release the Chiron, which was considered its 'Halo Car'. This basically means it was the culmination of the best of everything Bugatti had to offer in a hypercar. That was the Chiron. However, this year, Bugatti has gone ahead and released an extremely limited issue model called the Bugatti Centodieci, which is their most powerful model yet.

Modelled on the classic EB110, there will be only 10 of the Bugatti Centodieci and they're priced at \$9 million each. Also, they're all already sold out. Yep. At \$9 million each.

There's a story behind the Centodieci as well, like we mentioned above, it's based on the EB110 model from the

90s. Centodieci actually means 110 in Italian. The EB110 was one of Bugatti's most popular cars back in the 90s, before they were acquired by Volkswagen. Before they reached that point however, they were pioneers in the supercar division, with the EB110 competing with the likes of the McLaren F1 for the title of fastest car. The EB110 was created to celebrate the 110th birthday of Ettore Bugatti, hence the EB.

The Centodieci is built on the base that is the Chiron, but visually shares a lot of similarities with the EB110. It houses an 8.0-litre quad-turbocharged W16 engine, and can produce 1577 horsepower, which is almost a hundred more than the Chiron. The Centodieci also weighs almost 20 kg less. The car can go from 0-100 km/h in just 2.4 seconds and can hit a top speed of 380 km/h.
