

Dolphin adopts whale

The orphaned calf even learned to act like a bottlenose dolphin, gaining acceptance into the community. <https://digit.in/sep19-25>

Koala poo transplant

Poo transplants between koalas with different diets can actually help to save them. <https://digit.in/sep19-26>

Animals with a lack of pigments in their hair, eyes and skin are called albinos. Melanistic animals have an excess of black pigments. Albinism is recessive while melanism is dominant.
