

**RAZR Folding phone**

Motorola seems to be on track to release their foldable RAZR smartphone before the end of 2019. <https://digit.in/oct19-93>

**Logitech acquires Streamlabs**

Logitech has acquired popular game streaming tool Streaming for \$89 million. <https://digit.in/oct19-94>

>> FEEDBACK FOR THE SEPTEMBER 2019 ISSUE OF DIGIT

Send your feedback at editor@digit.in

Dear Editor,

Reading your article - "How to tweak Network Adapter settings to get the most out of your network". Under the section 'Assign higher Receive/Transmit Buffers', you wrote, "Ensure that the transmit buffer is double the receive buffer".

Are you sure?! In my Intel and Realtek NICs, that proportion is inverted: by default the receive buffers are double of transmit. Also one of the Realtek NIC cannot be tweaked toward higher numbers of buffers, in terms of receive/transmit buffers, the values are 512 / 256 respectively.

—Enrico Tibaldi, Italy

Those configurations were to ensure your data packets aren't dropped. The simple rule is to maximise both, transmit and receive buffers.

—Mithun

Hello Robert,

So, I was sitting in my room today, rather bored when the doorbell rang. Knowing that the month has just started, I rushed to the gate and there it was, my package of knowledge. Finally I had my issue of Digit. Usually, I rush to open the pack, take out the contents and put my brain on read mode.

Recently, this has become a simple routine. Every issue tends to extinguish

this burning fire inside that wants more knowledge, and yet leaves just enough flames to keep me eager for the next time. But today, I had just reached the feedback section & BOOM! There it was, an idea, a task, and a mission of sorts striking me (that happens rarely).

So, here I am, writing this letter, out of sheer optimism that even if by a long shot, Maybe I could write for DIGIT.

Now, after beating around the bush, and writing probably just enough to give you a taste of my writing skills, here it is: we all know the irony of how technology is supposed to save our time and how it ends up wasting it, but that's a different rant altogether. I want to communicate how technology can practically be used to help boost our productivity.

Going on time logging apps are cool, but at what point do they become a chore of their own? How can you automate some tasks on our mobiles?

So, in essence I'm looking to write on how we can effectively use all the Tech at our disposal instead of just wasting it.

I hope to hear from you.

—Jaskaran Singh

Hey Jaskaran,

We would love to have readers write for us, though of course, you have to accept that we will be ruthless with our feedback, in order to help you improve the quality of articles that you write. I actu-

ally do like some of those ideas you have pitched (pretty smartly, I should add), but I've decided to use your letter as a way to get more feedback from people. Thus, I ask readers to write in and tell us which of your suggestions they really want to read about, and then we can go ahead and help you structure and write that article.

—Robert

Hi Robert, just read your RSS Feed.

Please take my suggestion

seriously. Make a discord channel. That's the best way I think Digit readers chat with each other as well as you guys. And I think Digit should have an ambassador character. That would make it a lot more fun to read Digit. Also, thanks to you guys I found Chess Rush. It's a great auto chess game made by Tencent. I really enjoy reading Digit and the things I learn here on Digit is lot more than all the scam that they teach you at school. Hope you guys will make a discord chat.

—Milan Muhammed

As I had said in my column Milan, if there's a place you readers like to hang out, let us know and we will come to you. So your wish is our command; you can find the official Digit discord server here: <https://discord.gg/mYD8XVt>
