

Google Recorder App

The Google Recorder App on the Pixel 4, seen in leaks online, is now available to download on via apk. <https://digit.in/oct19-91>

Banned from Pokémon Go?

Pokémon Go has allegedly banned a number of Xiaomi smartphone users from their game. <https://digit.in/oct19-92>

Letter of the Month

Dear Digit Team,

I don't know why I am writing this mail. I am that silent member of the Whatsapp group who sits back behind a firewall and mocks at the human folly it presents (but never replies). I am like most of the Digit-ians who went from library to the stall to permanent subscription. This mail is a feedback-cum-suggestion-cum-request mail.

Boo-man is just amazing. He can get you thinking. I tried matching Boo-man's writing style with every other Digit member but all in vain. I also noticed that his style has not changed in months. So it is someone in the editorial with higher frequencies of writing. So list comes down to Mithun, Dhriti, Aditya or Manish. But no one is as old as Boo-Man thinks he is. I assume that Boo-Man is a parallel personality within someone aforementioned. (A clue would be helpful, Team Digit!)

I love the snippets and read most of them. A small suggestion there, it would be helpful if keep them alphanumeric and avoid the dash.

SKOAR is one of the most amazing parts of the Digit. My issue is that neither do I have a high end PC nor I want one nor do I want to buy expensive games (I can enjoy decades or even centuries of Digit with the same amount). So please review some cheap or free or open-source games that can run on entry level PCs.

Demystify supplements are very interesting. Physics and chemistry topics are very helpful.

Gaming posters are stunning. I have pasted all of them on a wall and they make a great background during Skype or video calls.

1000 words by

Aditya is just fabulous. I can imagine the pain in find-

ing the best pics which are worth a thousand words.

It's great to see anime reviews which were requested by a lot of readers. Could you please suggest some free sites or apps to watch or download them. I have only Prime video, Jio Cinema, Jio TV, Airtel Xstream (no Netflix).

I have read people saying that DVDs are outdated or old or useless. But Team Digit please do not stop them ever.

I have just started tinkering with Arduino Uno R3 board and it would be helpful if you provide a Fast Track or a series of articles on the topic.

Please recommend an email client with encryption for both Android and Windows as I want to manage my multiple accounts on both OS. (possibly with rediffmail support as most email client don't support it).

Do you have intern program at Digit?? I would love to work with you guys. (psst...I am in 11th standard)

Hey, there is a special message for you. Have fun solving CTC 1 MK version!!! Nothing was unintended. Everything has a meaning. (It is a small & simple logic) (Feature phone).

—Maanit Kalsotra

It's better we not speak of Boo-Man lest he decides to boo us! Thank you for your wonderful words, Maanit. About the open-source games, you might want to check out the e-DVD since we've had a couple of those in the past. While you're at it, drop an email to archive@digit.in to get a FastTrack on Arduino for free. For enabling PGP/MIME encryption on your emails, you can use K-9 with OpenKey-chain on your Android phone and Outlook on desktop.

Lastly, email us to know when internships are open.

—Mithun
