

SECURITY WATCH

Malware created to invade Indian ATMs

Kaspersky's Global Research and Analysis Team discovered a malware named ATMDtrack which was created by the Lazarus Group to infiltrate Indian ATMs and steal card details. After further investigation, the researchers discovered more than 180 new malware samples which were similar in their code sequence to ATMDtrack, however, this time around, they weren't aimed at ATMs but their functions defined them as spy tools which have now been dubbed Dtrack.

Dtrack poses significant threats such as giving the threat perpetrators complete control over infected devices. They can upload or download files and execute key processes. Coming back to ATMDtrack, it has been spotted on the networks of several Indian banks since summer 2018 and Dtrack seems to be more sophisticated and is targetting Indian research centres.

MOBILE WATCH

ASUS ROG Phone 2

The ASUS ROG Phone 2 is every geek's dream smartphone. Powered by a Qualcomm Snapdragon 855 Plus, 128GB of internal storage, 8GB or 12GB RAM and several high-end features such as UFS 3.0 storage, 3D vapour cooling chamber and the gargantuan 6,000 mAh battery, this device gives every flagship smartphone a run for their money. It also features a 6.59-inch FHD AMOLED display with a 120Hz refresh rate. The device houses Air Triggers 2 and ultrasonic touch-sensitive patches which act as customisable buttons to emulate a joystick. There's also a dual-camera setup on the rear with a 48MP Sony IMX586 sensor and a 13MP wide-angle lens, along with a 24MP selfie camera. Talk about overkill for the price of just ₹37,999.

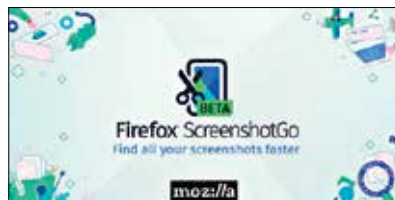

APP WATCH

Firefox Screenshot Go

Most of us take a ton of screenshots on our smartphones and organising that mess can be quite arduous. Enter Firefox Screenshot Go. Presently in the Beta version on Google Play Store, the app allows users to easily locate the screenshot they're hunting for by simply searching for them by text. Confused? Let us explain. The app essentially accesses the screenshots folder in your smartphone (when given permission, of course) and finds screenshots by scanning for the search-phrase you

have typed in. For example, if you type "Digit" in the search bar, Firefox Screenshot Go will only bring up images that have the word "Digit" in it. The app automatically indexes all the text in the screenshots on your device and keeps it ready for search.

In addition to the screenshots folder, the app also imports screenshots that are saved in other folders, however, it will not duplicate any screenshots, so you don't have to worry about pesky doubles. All the recent screenshots are displayed

neatly and the app allows users to find the latest ones instantaneously. However, the best feature of this handy little app is that it lets you use the screenshot text scanner button to extract or copy text from your screenshots very easily. You can then perform further actions such as conducting a web-search of the text, share the text, open links and more.

There's even a GO button which instantly takes a screenshot. The GO button is a hovering icon that can be moved around to any corner of your screen and is always available to access no matter what app you're working with. When you take a screenshot using Firefox Screenshot Go, you will get the option to move that particular screenshot into the 'Collection' tabs which include Shopping, Finance and Banking, News, Article and more.

Spike

Spike is a conversational email app that essentially ditches threads and headers and adds read receipts, like in WhatsApp, to simplify email conversations.

Post-it

The Post-it app allows you to take notes, capture physical notes with your smartphone camera, and share them with your friends and co-workers. You can also draw, erase, and type onto the post-its.

Fluid Simulation

Fluid Simulation is a satisfying, stress-busting app that allows you to play with fluid patterns and swirl them around to create some beautiful patterns which can also be made into a live wallpaper.
