

In the Loop

WE'VE BEEN HEARING ABOUT A RECESSION

being around the corner for a few months now. Some analysts say it could hit us within the next year while others are going ahead with more conservative estimates. Either way, it seems that we might be in for a tough time in the coming year or two. Governments around the world, including ours, have started enacting new policies to keep the economy in check for this very reason. You've probably heard all of the above from various news channels so why are we, a consumer tech magazine, harping about the same? It's the theme of the cover story, so why not? It's times like these that call for a prudent approach to spending your money. You'd want to save up as much as you can and spend wisely.

We're going to be focusing on bettering ourselves this festive season rather than spending frivolously. Obviously, if you have a need to fulfil then, by all means, you should buy whatever is necessary, but if you have some money saved then spending that on learning a new skill or just improving your well-being should be a priority. Which is why our focus is more on spending smart by enlightening yourselves about how you can make the right choice, and we're helping you do that by including buying guides focused on the most popular gadgets that will be bought this Diwali. We arrived at these categories by running a little survey on our Instagram account.

It isn't just buying guides, however, we've also put in a story to help you hunt down the best deals. This way, you're not only solving your gadget cravings but also saving money while doing so.

Personally speaking, I really wanted to build a custom liquid cooling loop in my home PC, and I've been figuring out layouts and reading about galvanic corrosion between fittings and water blocks of different brands. I'd say, it's been two or three months since I started finalising my loop configuration and this news about the economic slowdown has been a Grade-A buzzkill for me. You see the whole loop costs quite a bit and I've been saving up for some time for it. Having to put my plans on ice for a year or two is... you get the drift, right? What's worse is that I've already procured some of the components from Aliexpress, so now if I stop, I'll have a bunch of stuff which cannot be used anywhere else. The plan was to have two radiators with a GPU and CPU block so that I could make the most of the custom loop. Now I have to choose between holding back on all remaining purchases or I could go ahead and cool just the CPU for now and add the GPU block later. It's the single most expensive piece of the entire puzzle anyway.

For me, there isn't the option of not finishing this build because that's the only way I can get the PC functional. What lies ahead is the way I go around doing that. **d**

In order to encourage charity this festive season,

9.9 Media has an offer for you. If you donate to a charity (preferably one that uses tech in some way), we will match your donations. This offer is open to the first 50 readers who write to us with details of a donation made (up to Rs 2,000), then we will match the donation to the same charity, effectively doubling your generosity. This offer is open for all donations made in the month of October 2019. Send details of your donation to editor@digit.in. The charity you donate to has to be registered with the Government of India and listed on the NGO Darpan portal (ngodarpan.gov.in).

**DONATE
THIS DIWALI,
AND WE WILL TOO**
