**THE HURRICANE** that the social media phenomenon Tik Tok is, especially in India, may have eclipsed the commendable success of yet another social media platform, Smule. Smule is a singing platform that was initially dubbed Sing! Karaoke. The app was released on iOS in 2012 with its subsequent release on Android in 2013. Let's throw a few stats at you. Smule presently has over 40 million global users, and a massive 8 million of them reside in India, amounting to about 20 per cent of the total number of

users. India has a rich culture and the music that emerges from our sometimes, inconspicuous land is often rich and meaningful when it comes to lyrics, composition, and instruments (not looking at you, Mika Singh!). Smule, in addition to a slew of well-known as well as a considerable number of

lesser-known English tracks, also features a wide range of Bollywood or Hindi tracks on the app for people to test their vocal skills on. The aforementioned number of users in India utilise this underrated app for an average of 57 minutes a day. This daily engagement time is nearly three times that of the users of Smule in the US, according to Smule.

The pocket recording studio essentially allows aspiring singers, or even casual singers, to record them-

selves singing a track of their choice, with the option of having a video of themselves with the recording as well. There's even a bunch of studio-like filters to fine-tune your voice. Some of these filters can even turn amateur voices into stellar performers (though you need to have the basic ability to keep pitch and rhythm obviously). The Indian talent on Smule is ever-inflating, and with Smule raising \$20 million recently from Times Bridge, a wing of the Times Group, the company has assured that it is working tirelessly towards expanding their footprint in our country even more. This interactive singing app has users belting out 20 million songs daily and even gives you the chance to sing duets with established singers such as Ed Sheeran, Charlie Puth, Jessie J and many more, so the appeal is certainly comprehensible. We've compiled a list of tips and tricks that will guide you along your path to becoming a Smule sensation.

Smule hands users the power to share their music and collaborate with like-minded individuals.

### **CHOOSE YOUR HEADSET AND MICROPHONE CAREFULLY**

First and foremost, use headphones no matter what. If you sing straight into your smartphone's microphone, be it an iOS or Android device, an echo is usually created which can be quite unendurable for people who are listening to you. You don't want that, do you? When picking headphones you can consider
