

OnePlus 7T reveal

The OnePlus 7T and OnePlus 7T Pro press shots were revealed hours before their announcement. <https://dgit.in/oct19-07>

8K Xiaomi phone?

A new Xiaomi phone could be the first to support 8K (7680 x 4320) @ 30fps videos. <https://dgit.in/oct19-08>

iPhone 11 Pro Max

A13 Bionic processor

The iPhone 11 models are powered by Apple's A13 Bionic SoC with a third-gen Neural Engine. The logic board which houses the processor is square-shaped owing to the extra space taken up by the bulky camera module. The top board peels off the interconnect board to reveal the much-acclaimed A13 processor in addition to some silicon bits stuck on to these tiny boards.

Graphite thermal transfer material for cooling

In addition to housing numerous chips, there are numerous layers of graphite thermal transfer material up against the RF board. These layers of graphite serve as a cooling system for the iPhone 11 Pro models by drawing heat from the logic board straight through all the layers of graphite. The heat is ultimately dissipated into the rear case.

Dedicated camera RAM mystery

There have been a sizeable number of rumours flying around about the iPhone 11 lineup having an additional 2GB RAM just meant for image processing, over the confirmed 4GB of RAM which is accessible by iOS and apps. However, the second RAM chip seems to be missing even after looking into each camera module. There's an AD5844CDA0 chip that looked suspiciously like the second RAM chip but it is probably an image stabiliser or a processor.
