

Tesla police car almost runs out

A Model S police car nearly ran out of range mid-pursuit. It reportedly wasn't charged the previous night. <https://digit.in/oct19-09>

Bitcoin's lowest price in 103 days

On Sept 25th, at a price of \$8,486, a minor 1.35 percent decline in 24 hours, Bitcoin was at its lowest in 103 days. <https://digit.in/oct19-10>

CRYPTOCURRENCY: TO THE MOON!

A disruptive innovation
with insurgent
beginnings

Dhriti Datta | dhriti@digit.in

Did you know that the phrase 'To the Moon!' is a rallying cry of cryptocurrency, especially Bitcoin, investors' as a way of celebrating when the coin's value is increasing? If not, there's your TIL (Today I learned).

Let's get on with the article now. Cryptocurrency's erratic journey is a well-documented one, especially over the last three years. However, not many know that cryptocurrency is actually a product of decades of progressive thought, mathematical research and revolutionary attempts to radically change the intrinsic features of the world's centrally-controlled economy.

Cryptocurrency, also sometimes known as virtual currency, is a digital, peer-to-peer medium of exchange which utilises cryptographical functions to conduct financial transactions. They aren't controlled by any central authority and leverage blockchain

technology to achieve decentralisation and immutability. Basically, it is digital money that is untethered to any central server or decentralised, being exchanged from person to person without any intervention. Additionally, it is also global, meaning it can be sent around the world easily.

Unfortunately, in early 2018, the RBI announced a complete ban on the sale or purchase of cryptocurrency for all entities that are regulated by RBI. Arun Jaitley, the Finance Minister of India has stated that cryptocurrency is not recognised as legal tender in India and they are instead encouraging blockchain technology in payment systems. However, a petition has been
